Possible Evolutionary Picture

Tier-1 Survey and Hetdex

ASTRON

- > ~6" resolution
- > ~325,000 sources over 400 sq. deg
- > ~100 μ Jy/beam rms noise
- > Compared to 300,000 GLEAM sources over 60% of the sky

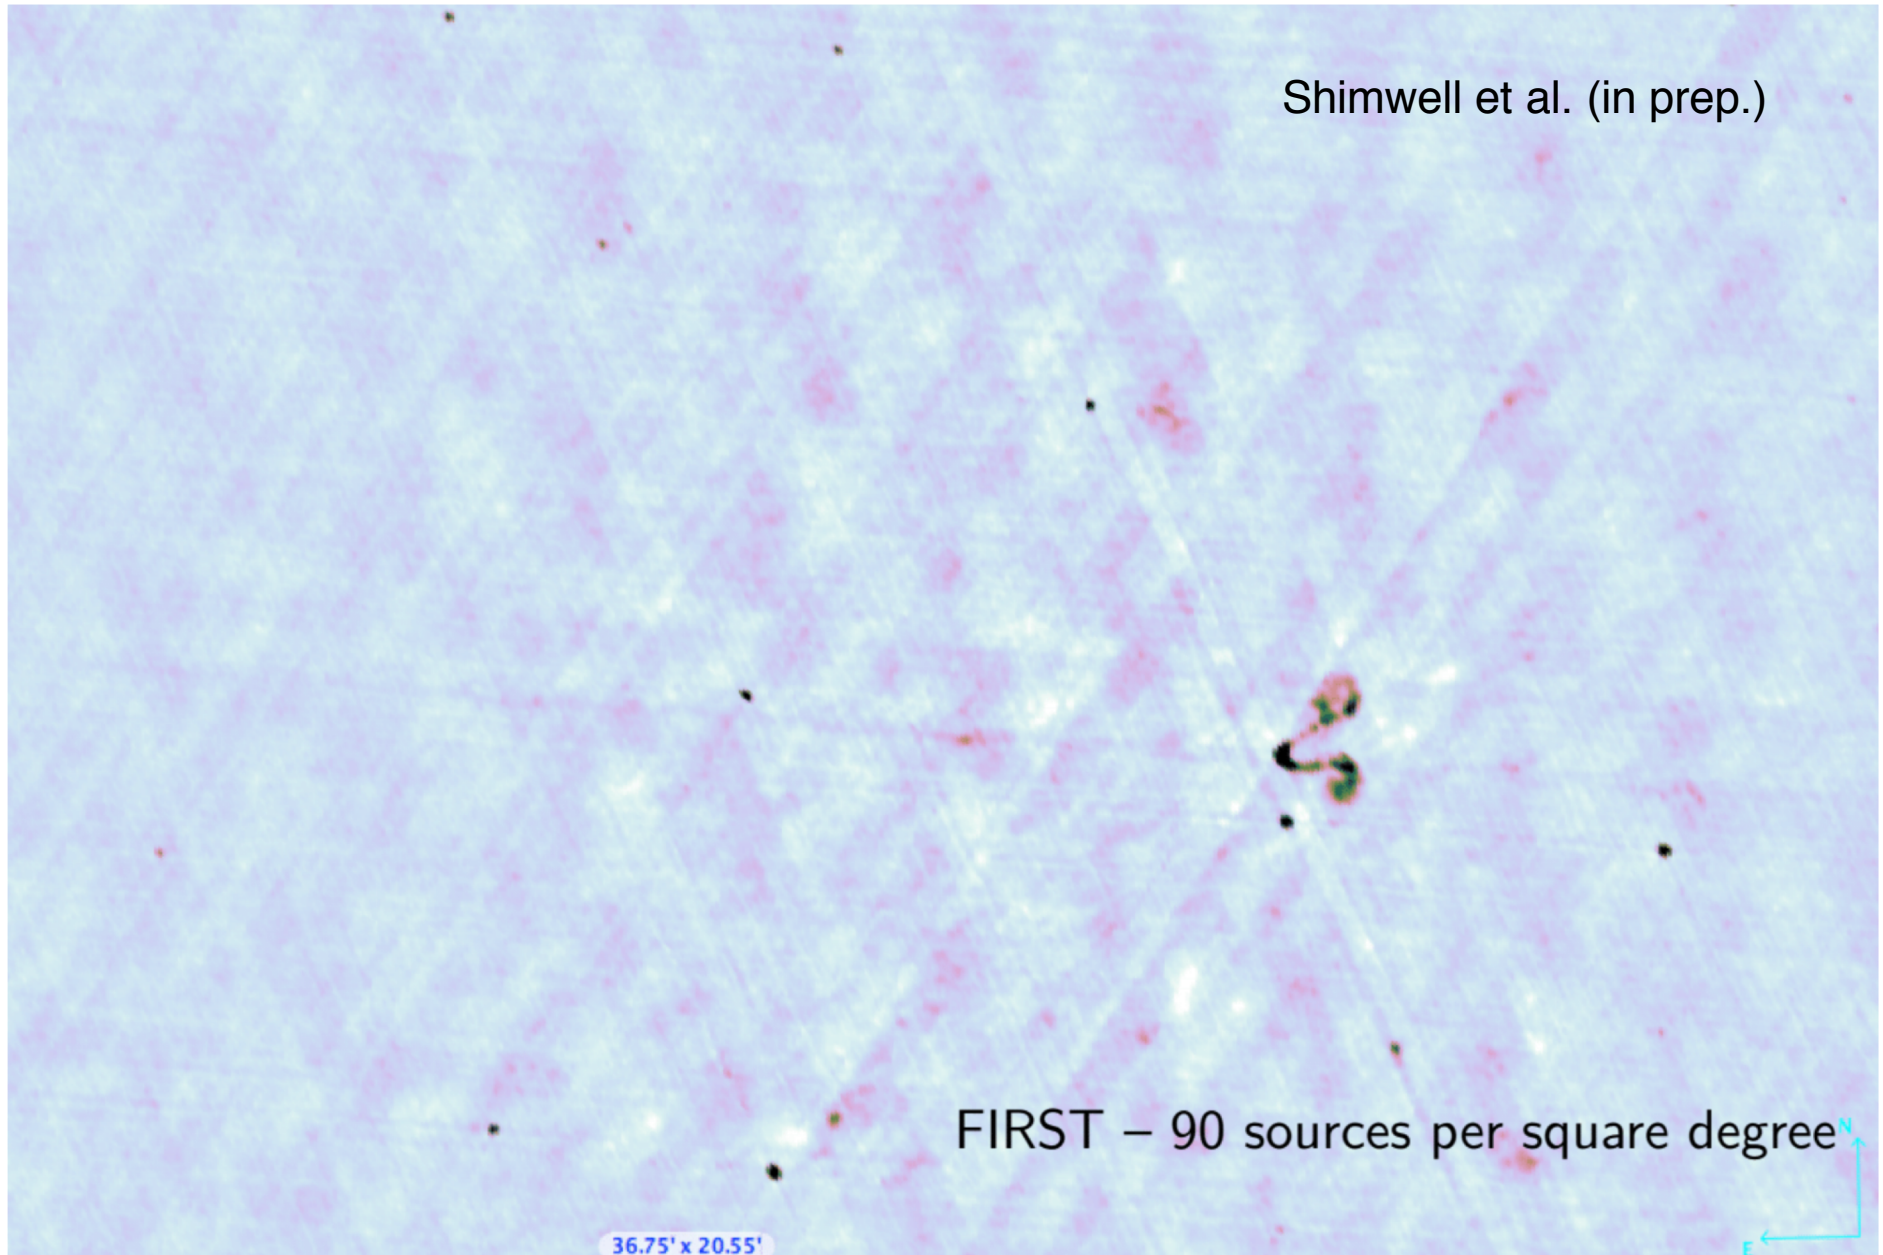

Shimwell et al. (in prep.)

LoTSS

Which peaked-spectrum source?

Which peaked-spectrum source?

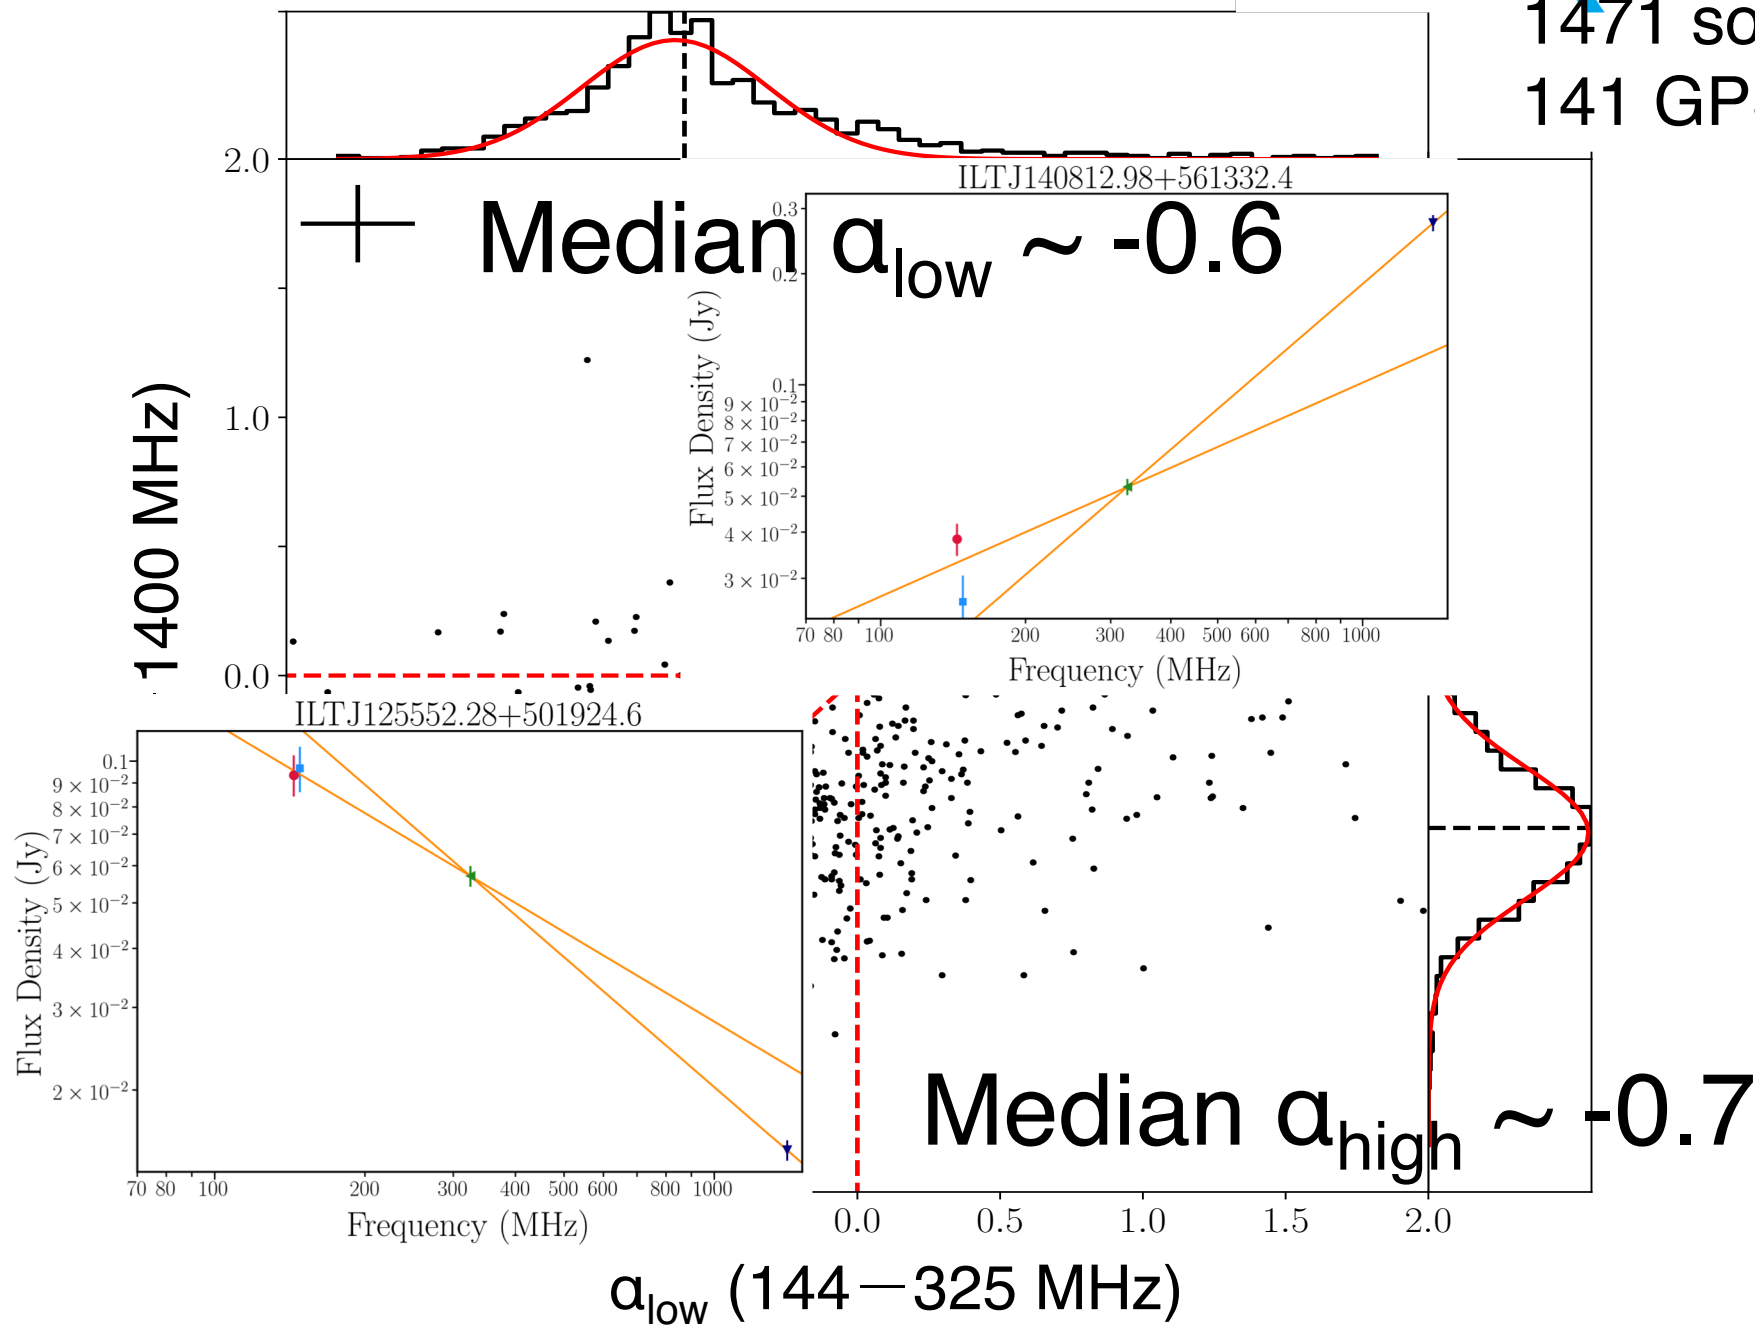

WENSS Flux Density Scale ☹️

LoTSS Colour-Colour Diagram

1471 sources

141 GPS

ILTJ113923.20+530054.6

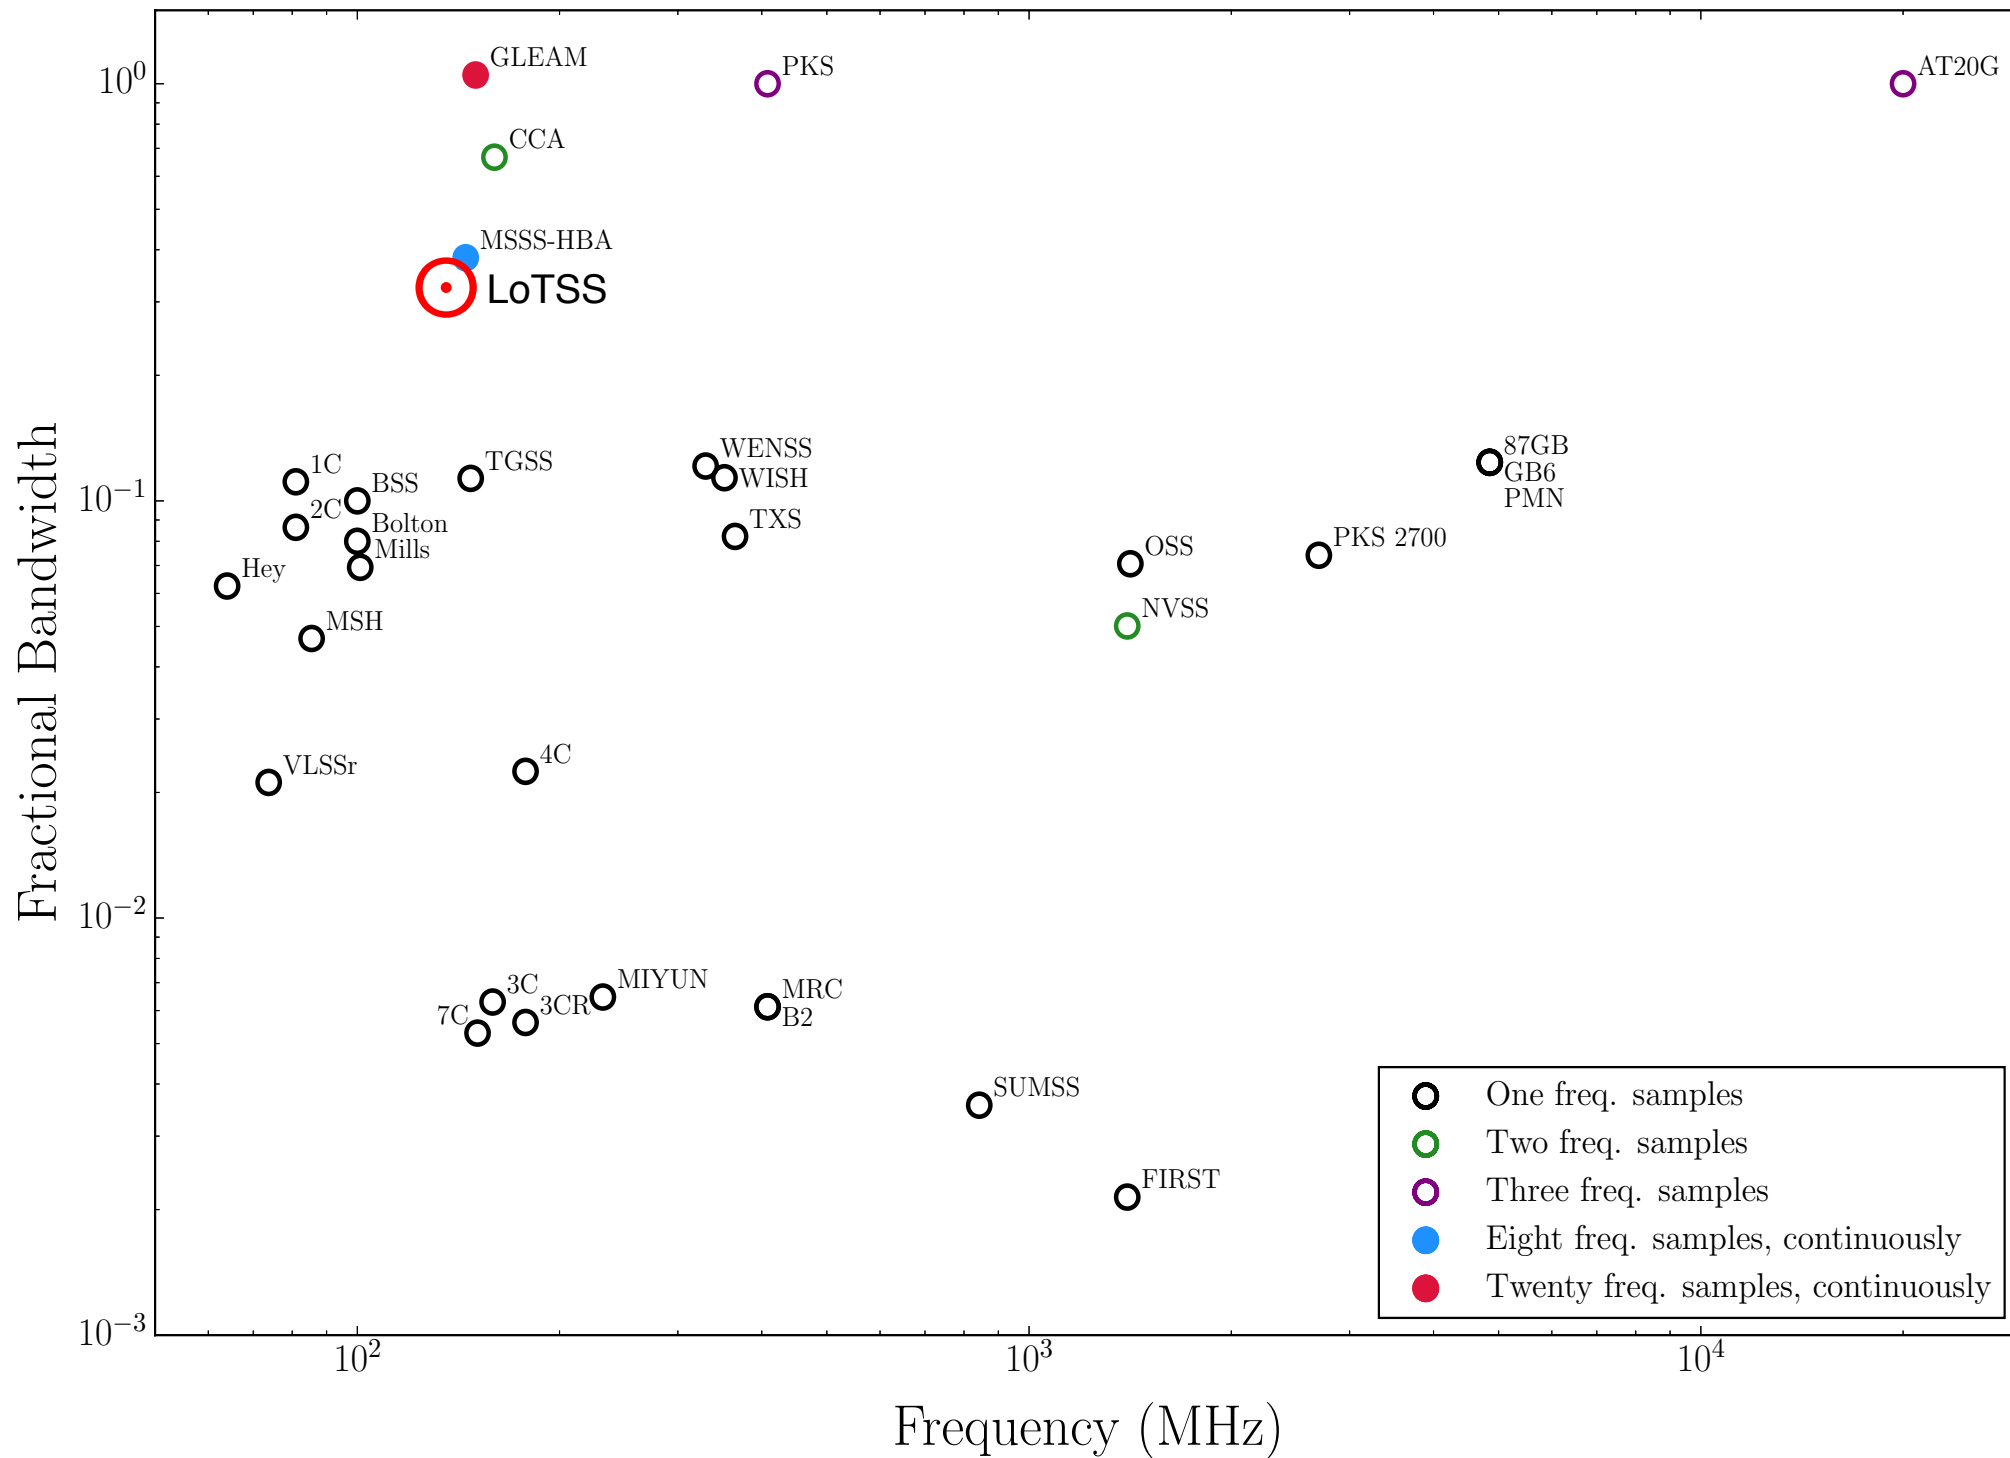

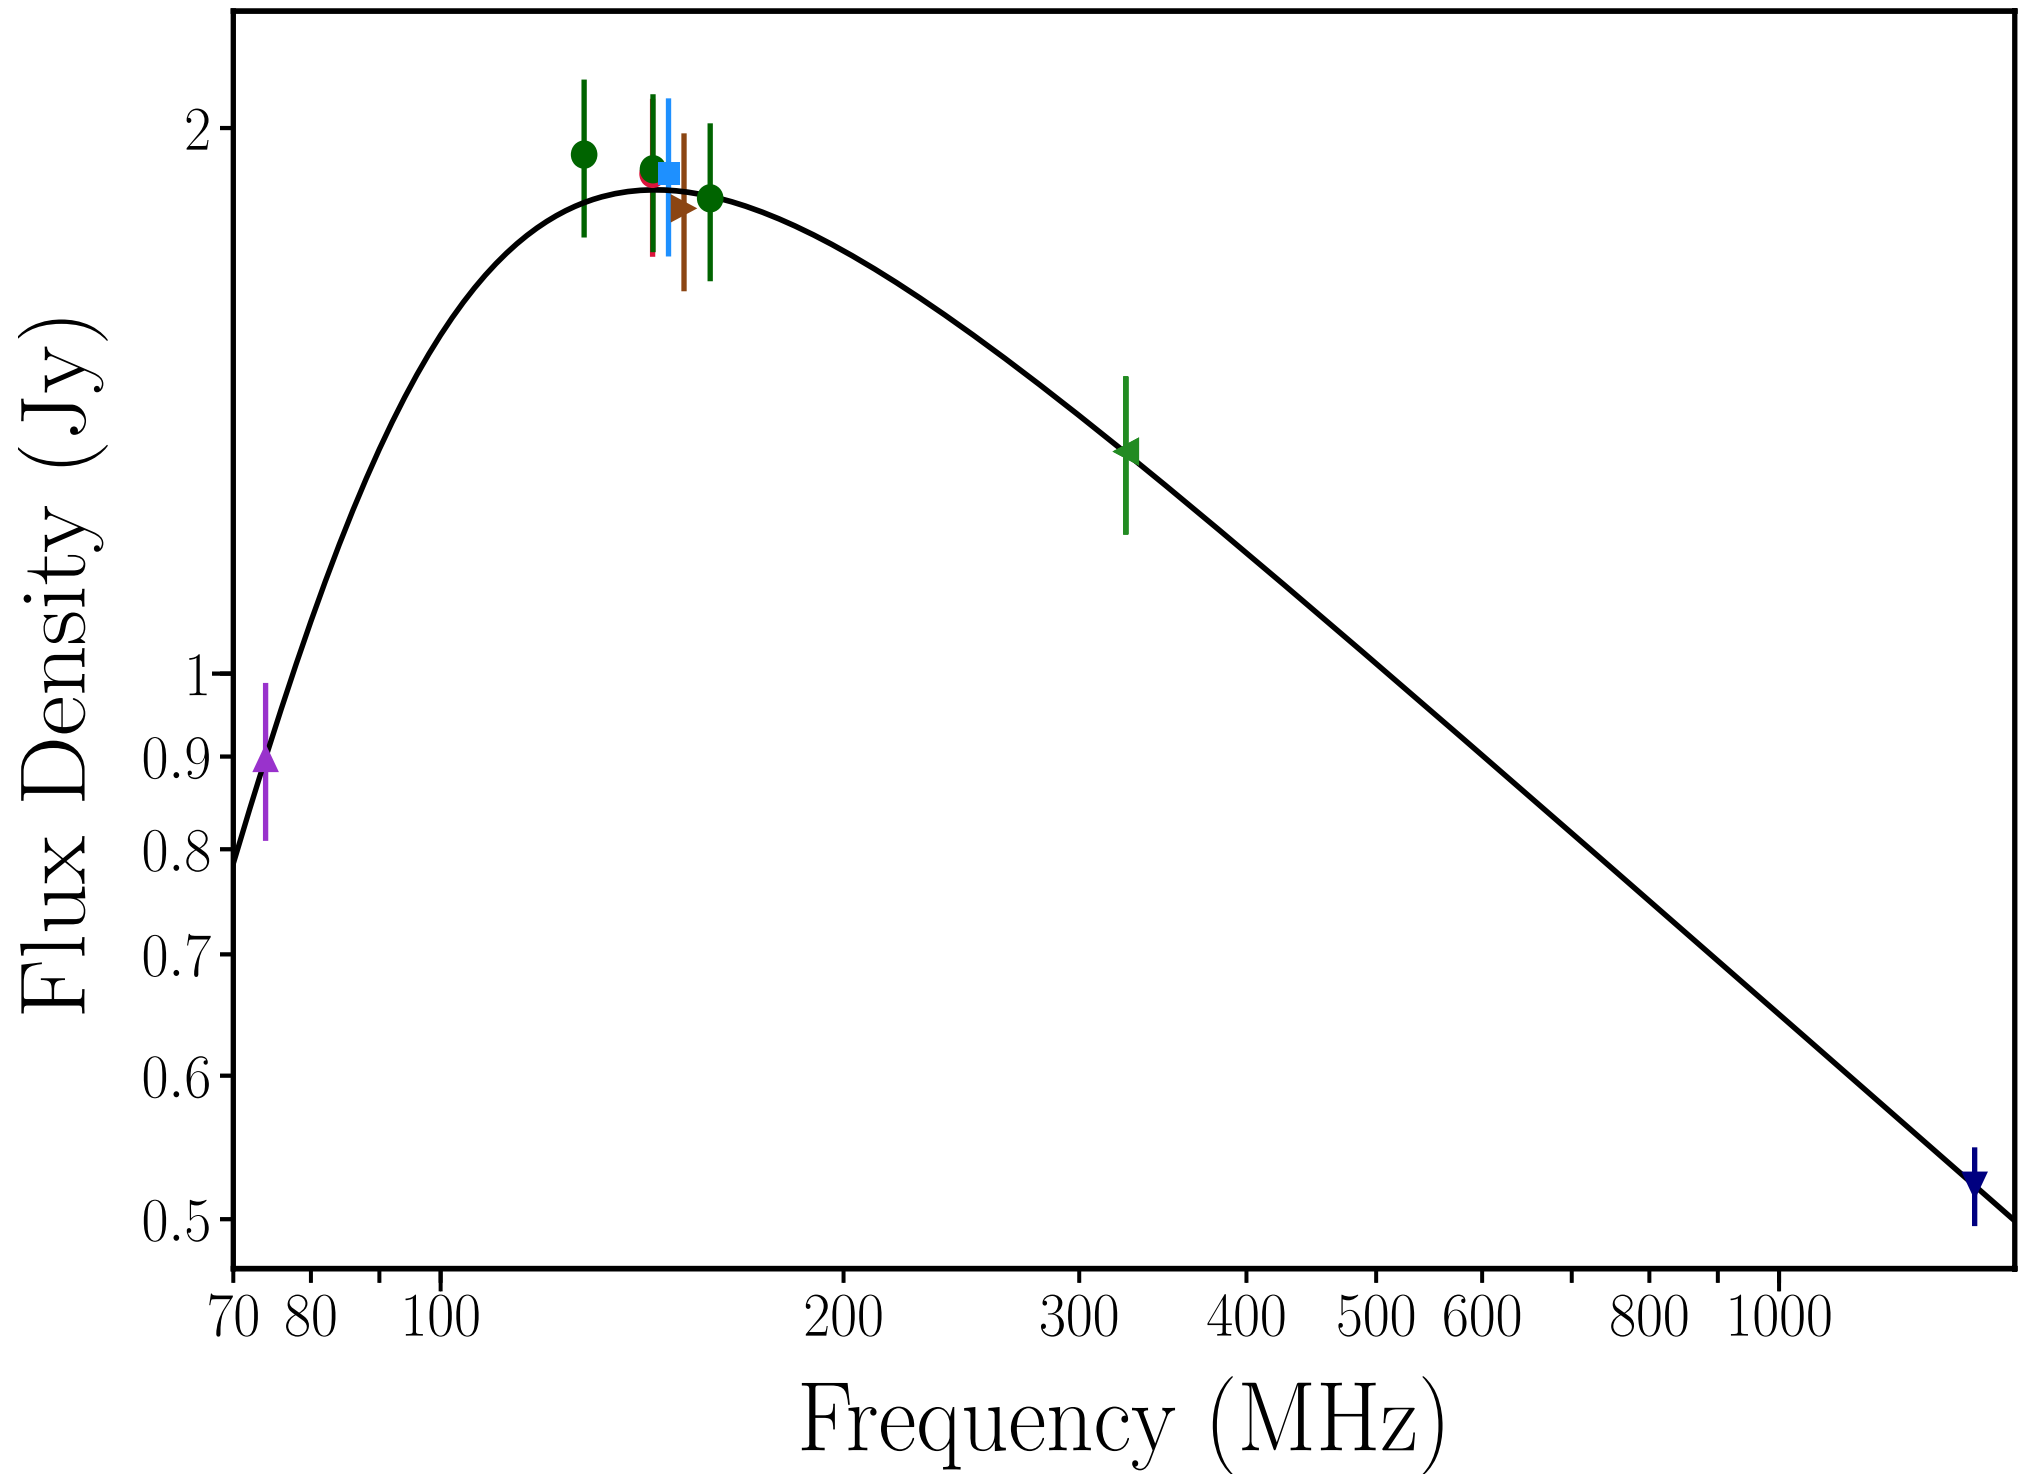

ILTJ104712.95+470332.6

ILTJ150919.80+472656.3

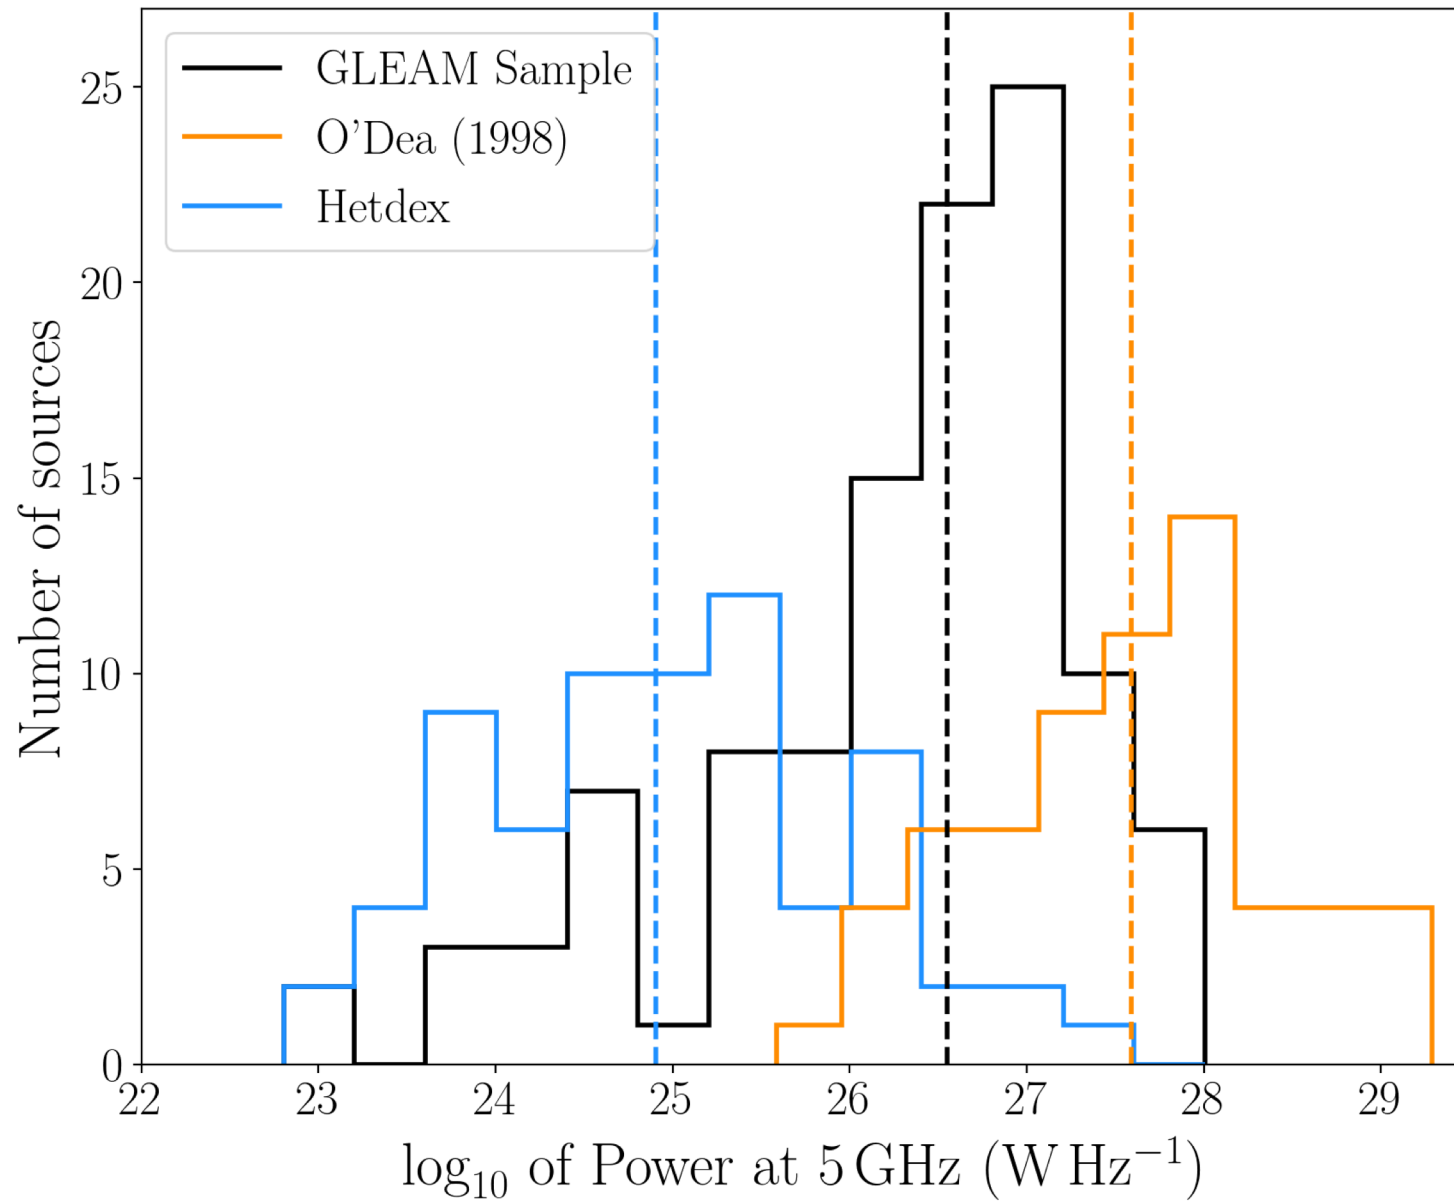

Too many...

- > ~10 % of sources that have NVSS/WENSS counterpart are peaked-spectrum
- > Obviously completeness issues but compared to complete sample with GLEAM, we have double the number of sources selected at the same frequency (~4.5%). Why?
- > 25 of 144 have spectroscopic redshift (SDSS + literature/NED)

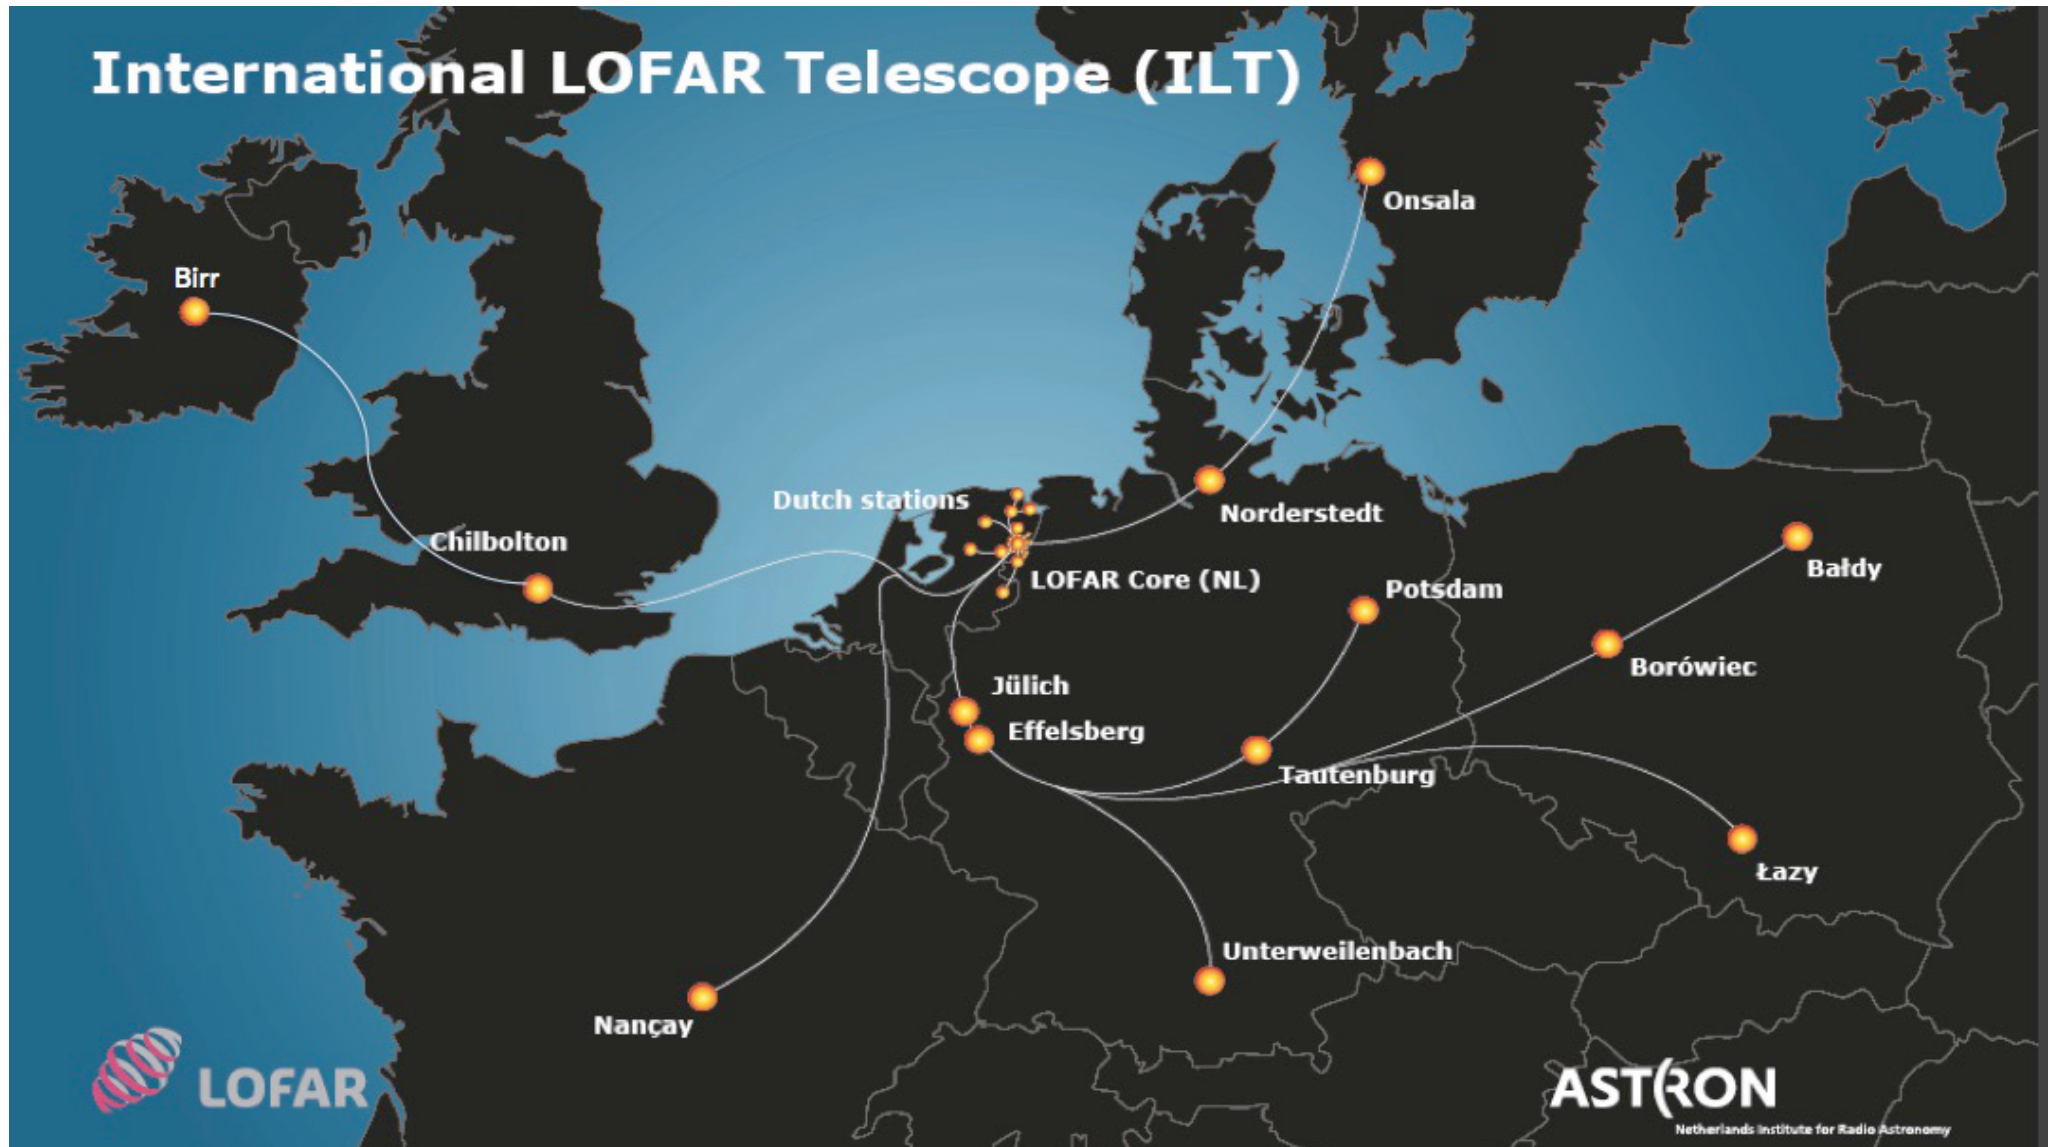

Power to the galaxies

International baselines

- › LOFAR international baselines can achieve a resolution of $\sim 0.5''$.

Summary

ASTRON

- > Identified ~150 new peaked-spectrum sources in Hetdex field
- > These sources are likely low luminosity counterparts to GPS sources identified at higher freq.
- > Maybe dominant precursors to FR1 galaxies?
- > Finding discrepancy in the number of GPS/CSS sources selected with LoTSS with those selected by GLEAM. Variability bias? Evolution?
- > Using the spectra is a very useful way to find restarted GPS/CSS sources? Duty cycle?
- > Question for Stas – what scale do you expect this low-surface brightness emission to be on?

Why Study GPS/CSS Sources?

ASTRON

- › Unique view of early AGN stages; probe of environment at scales of tens of pc
- › Which radio galaxies evolve into “A team” sources (Cyg A, Her A, etc)?
- › Are they confined to small spatial scales due to youth, frustration, or both?
- › Cause of the turnover in spectrum?
Free-free vs synchrotron self absorption

(see Peck et al. 1999; Kameno et al. 2000; Marr et al. 2001, 2014; Orienti & Dallacasa 2008; Tremblay et al. 2008; Tingay et al. 2015, Callingham et al. 2015)

NASA, ESA, S. Baum and C. O'Dea (RIT), R. Perley and W. Cotton (NRAO/AUI/NSF), and the Hubble Heritage Team

Widefield (continuum) survey evolution
