

Extra-planar Gas

Dwingeloo, The Netherlands

7-11 June 2004

Invited SOC members:

**Bob Benjamin
Robert Braun
Jay Gallagher
Jacqueline van Gorkom
Rob Kennicutt
Jay Lockman
Tom Oosterloo
Renzo Sancisi
Clive Tadhunter
Todd Tripp**

LOC members:

**Robert Braun
Nanuschka Csonka
Filippo Fraternali
Michiel van Haarlem
Raffaella Morganti
Tom Oosterloo**

While traditional studies of the ISM in galaxies have focused on processes within the high density disk, recent observations are opening a window on processes far above the disk which are intimately related to galaxy evolution such as: galactic-scale outflows driven by massive star formation, tidal disruption of satellites, continuing accretion of low mass companions, and the interaction between the AGN jet and the ISM. Current progress in documenting and understanding these processes will be the focus of the meeting.
