

Initial direction-independent calibration and data reduction with

prefactor

T2

Alexander Drabent

alex@tls-tautenburg.de

6th LOFAR Data School

Topics of the tutorial:

- capabilities of prefactor
- set up and run the pipeline
- troubleshooting / diagnostics

Alexander Drabent

archived data (LTA)

target observation (~hours)

+ bookended calibrator observation (~10mins)

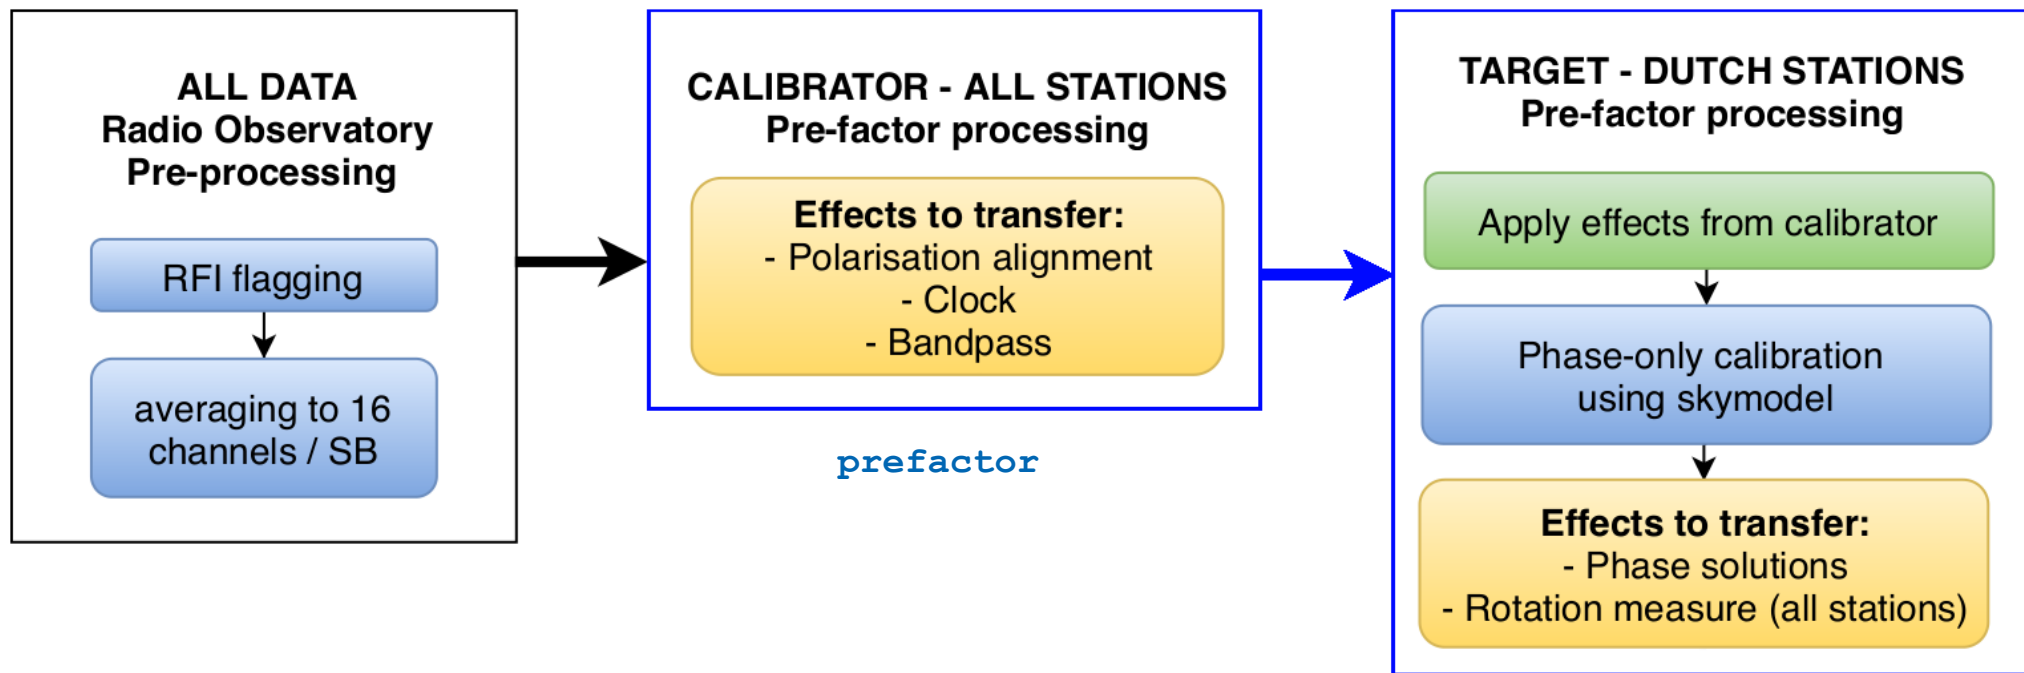

→ see lofarschool email to download both data sets

<https://lta.lofar.eu>

6th LOFAR Data School

<https://github.com/lofar-astron/prefactor>

6th LOFAR Data School

Capabilities of prefactor

- removal of **clock** offsets between core and remote stations (using clock-TEC separation)
- correction of the **polarization alignment** between **XX** and **YY**
- robust time-independent **bandpass** correction
- ionospheric **RM corrections** with [RMextract](#)
- removal of the **element beam**
- advanced **flagging** and **interpolation** of bad data
- mitigation of **broad-band RFI** and **bad stations**
- **direction-independent phase correction** of the target, using a global sky model
- detailed **diagnostics**

6th LOFAR Data School

Capabilities of prefactor

- removal of **clock** offsets between core and remote stations (using clock-TEC separation)
- correction of the **polarization alignment** between **XX** and **YY** instrumental effects
- robust time-independent **bandpass** correction
- ionospheric **RM corrections** with RMextract
- removal of the **element beam**
- advanced **flagging** and **interpolation** of bad data
- mitigation of **broad-band RFI** and **bad stations**
- **direction-independent phase correction** of the target, using a global sky model
- detailed **diagnostics**

extracted from a
calibrator observation
and transferred to the
target

6th LOFAR Data School

Software packages in use:

- **genericpipeline**: pipeline framework using parsets, mapfiles and creates overall logs

<https://www.astron.nl/citt/genericpipeline>

- Default PreProcessing Pipeline (**DPPP**): main data handling tasks, e.g., averaging, flagging, calibrating, applying solutions

<https://www.astron.nl/citt/DP3>

<https://www.github.com/lofar-astron/DP3>

- LOFAR Solution tools (**LoSoTo**): analysing/extracting parameters from calibration solutions, see tutorial **T1**

<https://github.com/revoltek/losoto>

Install prefactor within your Docker/Singularity container

```
root@936bc303e232:~/dockertest# git clone https://github.com/lofar-astron/prefactor.git
Cloning into 'prefactor'...
remote: Enumerating objects: 164, done.
remote: Counting objects: 100% (164/164), done.
remote: Compressing objects: 100% (122/122), done.
remote: Total 4163 (delta 100), reused 90 (delta 42), pack-reused 3999
Receiving objects: 100% (4163/4163), 165.18 MiB | 4.95 MiB/s, done.
Resolving deltas: 100% (2866/2866), done.
root@936bc303e232:~/dockertest# cd prefactor/
root@936bc303e232:~/dockertest/prefactor# git checkout 'v3.1'
Note: checking out 'v3.1'.
```

You are in 'detached HEAD' state. You can look around, make experimental changes and commit them, and you can discard any commits you make in this state without impacting any branches by performing another checkout.

If you want to create a new branch to retain commits you create, you may do so (now or later) by using `-b` with the checkout command again. Example:

```
git checkout -b <new-branch-name>
```

HEAD is now at b3c2f8a fix plots

```
root@936bc303e232:~/dockertest/prefactor# cp Pre-Facet-Calibrator.parset Pre-Facet-Target.parset ..
```

## range of median amplitudes accepted per station. Use [0, 0] for all  
## skip fitting the bandpass for international stations (set to True)  
## use autoweight, set to True in case you are using raw data
```

If you have troubles calibrating your data
changing parameters may help:

- nearby A-Team sources may require **demixing**
- for raw data you may perform **additional flagging**
- remove broken stations right from the beginning
- enable **solutions transfer** from template bandpass for International Stations if calibrator is not supported
- use your own skymodels

LBA observations need different parameters

#####
# Pre-Facet Target Calibration Pipeline v3.0 (04/09/2019)      #
#                                                              #
# Target part of the basic Pre-Facet calibration pipeline:    #
# - requires LOFAR software version >= 3.1.0                  #
# - requires losoto software version >= 2.0.0                  #
# - expects shared filesystem, that all nodes can reach all files! #
#   (E.g. a single workstation or compute cluster with shared filesystem #
#   doesn't work on multiple nodes on CEP3.)                  #
#####

calibrator solutions as input

6th LOFAR Data School

none of the A-Team
sources is closer than **30°**

potentially contaminated
UV data can be flagged

A-Team_elevation_target.png

6th LOFAR Data School

data clipped due to
potential contamination by
A-Team sources is
acceptable

Ateamclipper.png

6th LOFAR Data School

include RM values from
CODE

$$\beta = \text{RM}\lambda^2$$

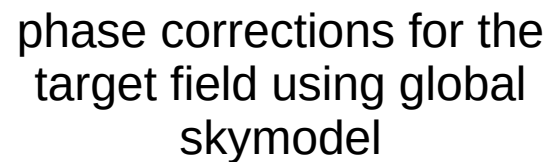

see **Ionospheric Effects**
in M. Mevius' talk (D2)

RMextract.png

6th LOFAR Data School

ph_po1XX.png

in **XX-YY** still some phase residuals are left.

Noisy parts pop up

ph_poldif.png

6th LOFAR Data School

additional time-resolved
diagnostics for separate
frequency chunks

XX, YY

ph_freq?? .png

6th LOFAR Data School

additional time-resolved
diagnostics for separate
frequency chunks

XX-YY residuals can be
easily spotted

noise increased at
Remote Station

ph_poldif_freq?? .png

6th LOFAR Data School

helpful for quality
assessment

easily spot bad
frequency ranges

unflagged_fraction.png

```

Antennas removed from the data: CS006HBA1&&, CS006HBA0&&
A-Team sources close to the phase reference center: NONE

XX diffractive scale: 5.8 km
YY diffractive scale: 3.5 km

Changes applied to solutions.h5:
2021-03-04 19:37:37: Bad stations 'CS006HBA0', 'CS006HBA1' have not been added back.

Amount of flagged solutions per station and solution table:

| Station | TGSSphase | RMextract |
|-----------|-----------|-----------|
| CS001HBA0 | 0.05% | 0.00% |
| CS001HBA1 | 0.00% | 0.00% |
| CS002HBA0 | 0.05% | 0.00% |

Overall amount of flagged data in the final data:

| Station | |
|-----------|-------|
| CS001HBA0 | 8.60% |
| CS001HBA1 | 8.70% |
| CS002HBA0 | 8.80% |

check data/calibration
quality
