Why care about cold diffuse clouds?

Moriarty-Schieven

The line of sight towards Cas A

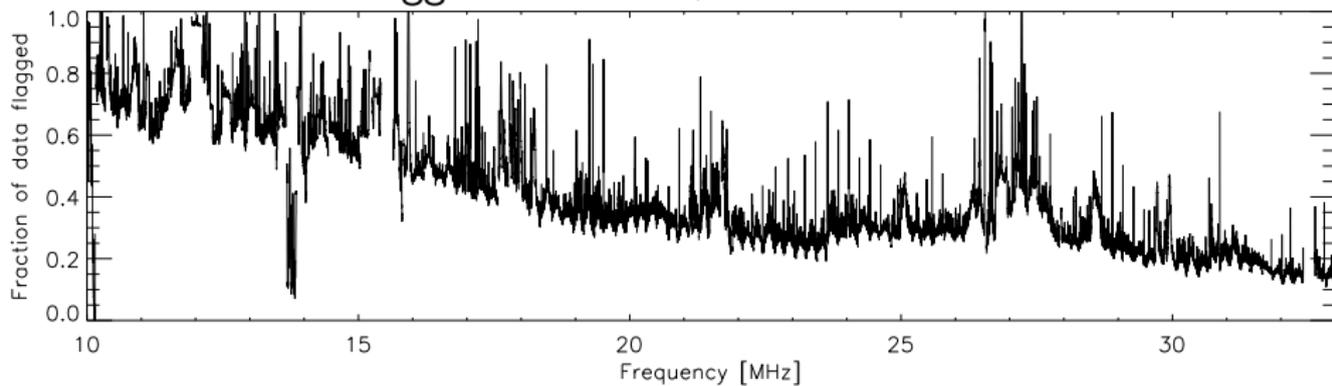

Davies & Mebold (1972)

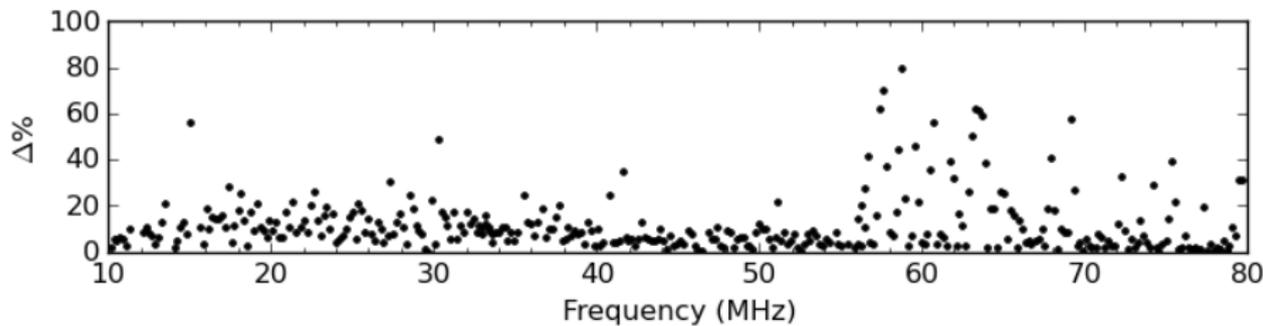

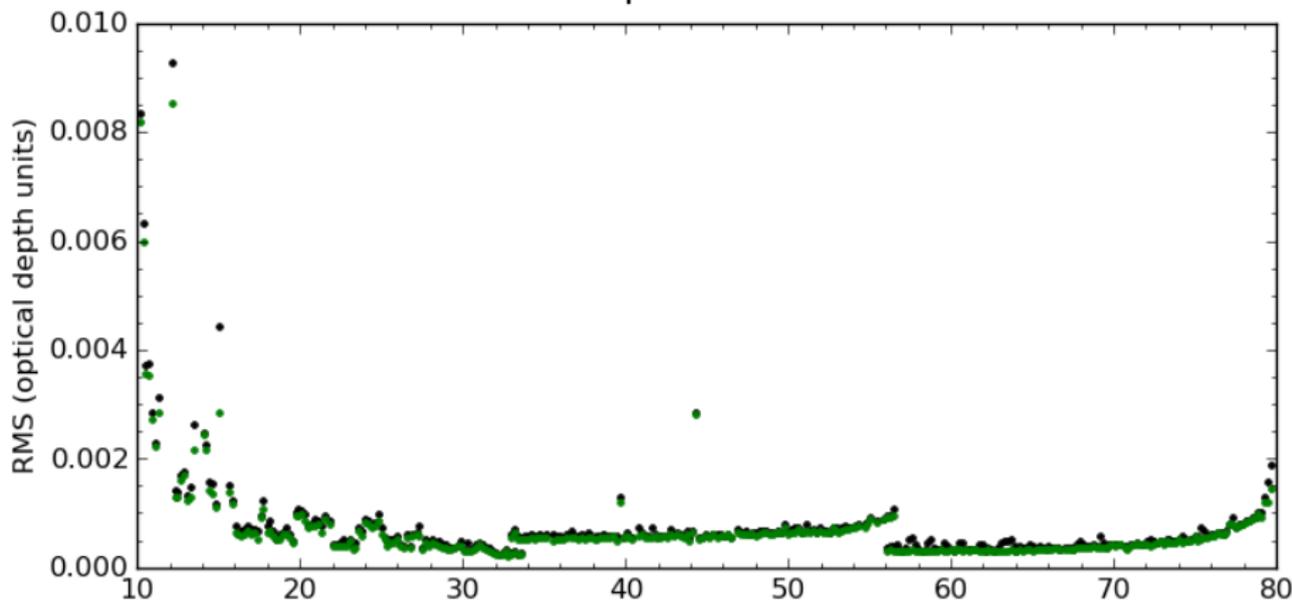

Table : LBA Observations

Observations ID	L184343, L40787, L69891, L69893
Integration time	2 s, 2 s, 1 s, 1 s
Observation dates	27 December 2011, 31 October 2013, 20, 21 October 2012 (15:00-01:00 UT)
Total on-source time	12 hr, 10 hr, 10 hr, 10 hr
Correlations	XX, XY, YX, YY
Frequency setup	56–80 MHz, 33–57 MHz, 10–33 MHz
Bandwidth per subband	195.3125 kHz
Channels per subband	512

Flagged data: RFI+bad time intervals

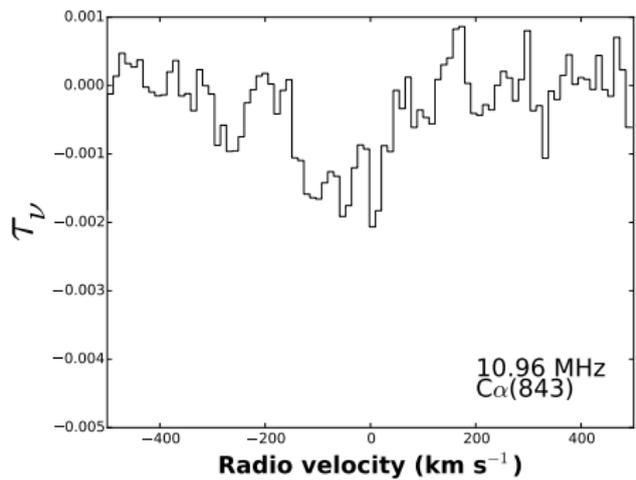

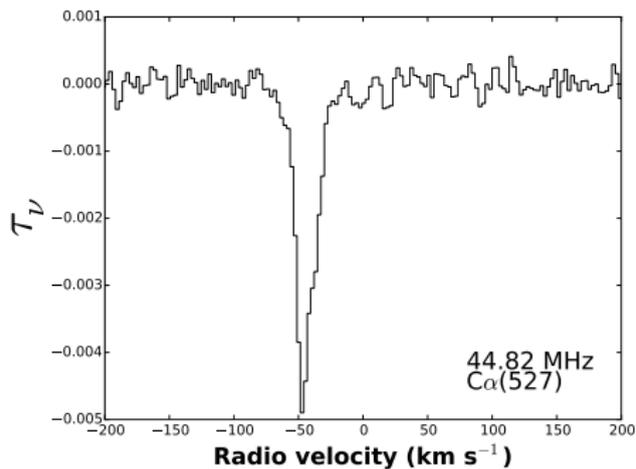

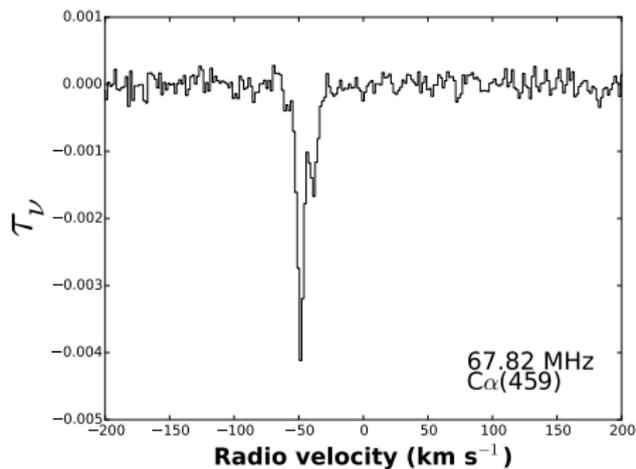

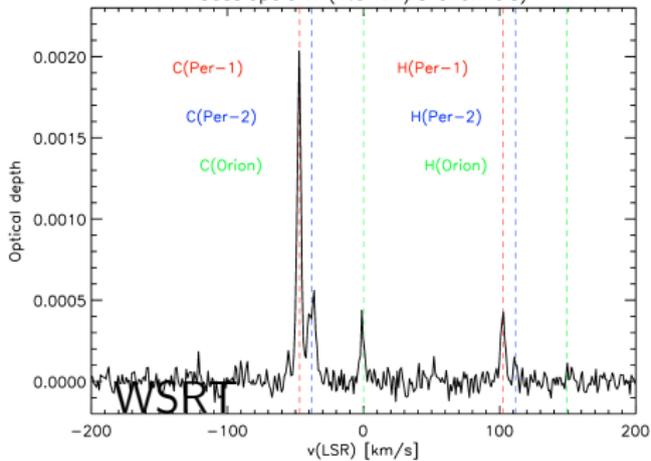

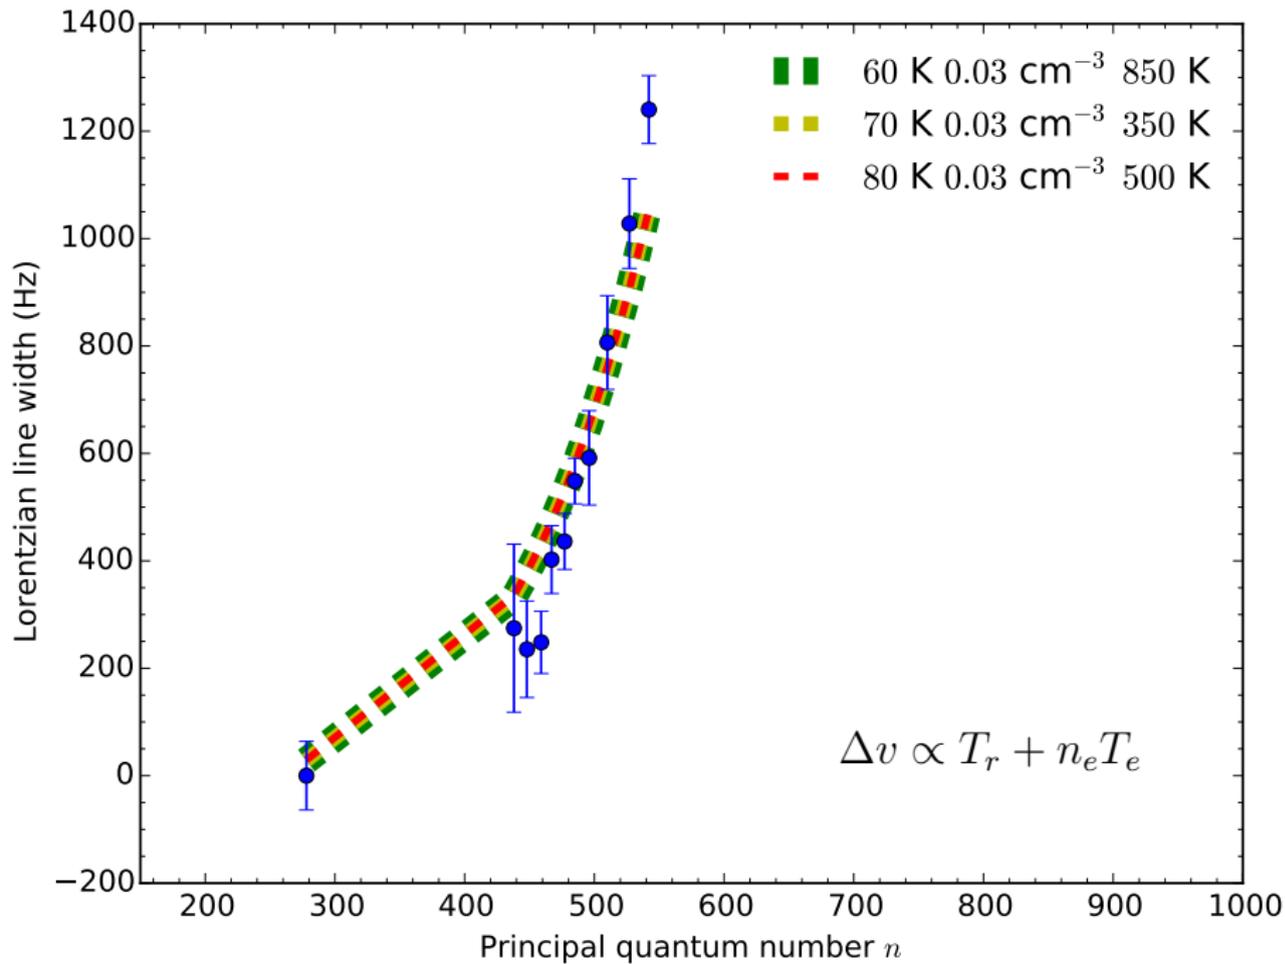

Sub band bandpass calibration

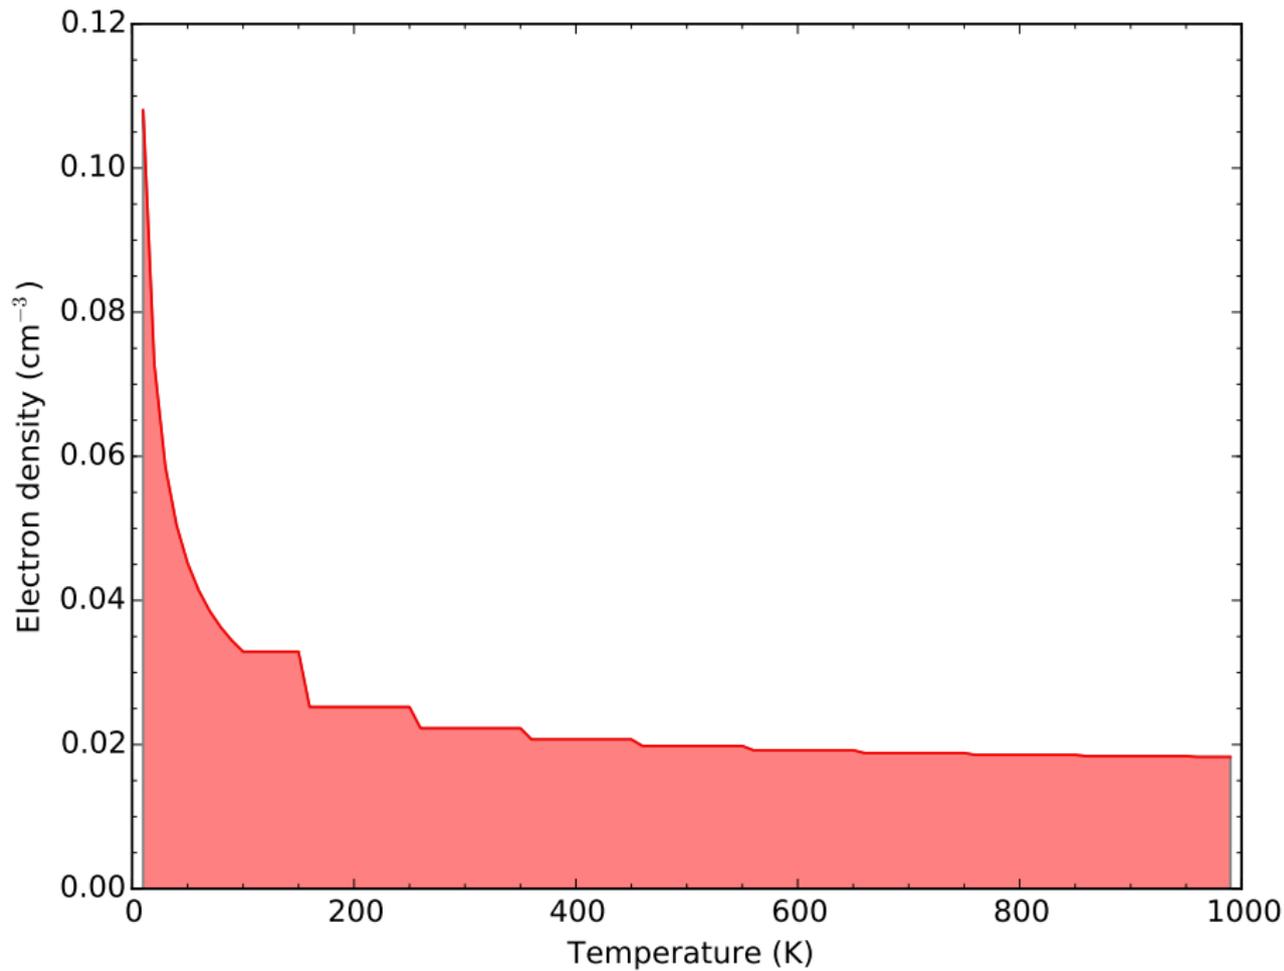

Results

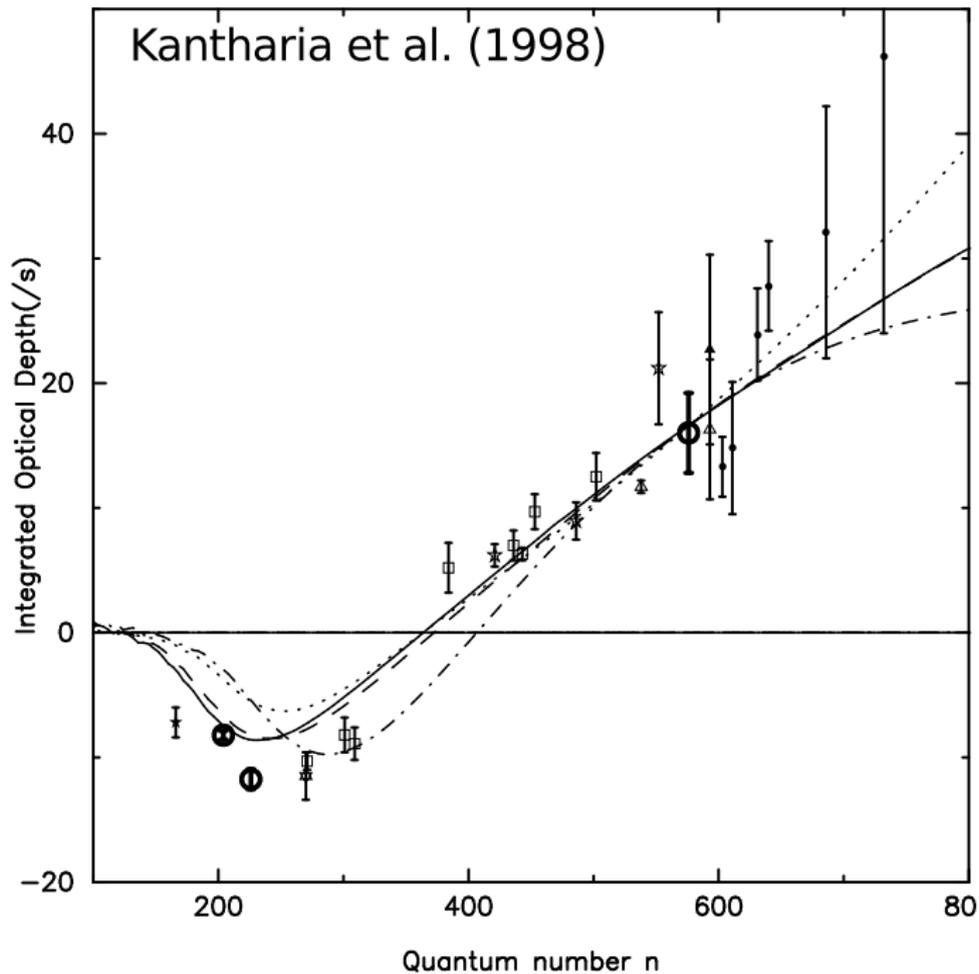

Cassiopeia A (1.0 km/s channels)

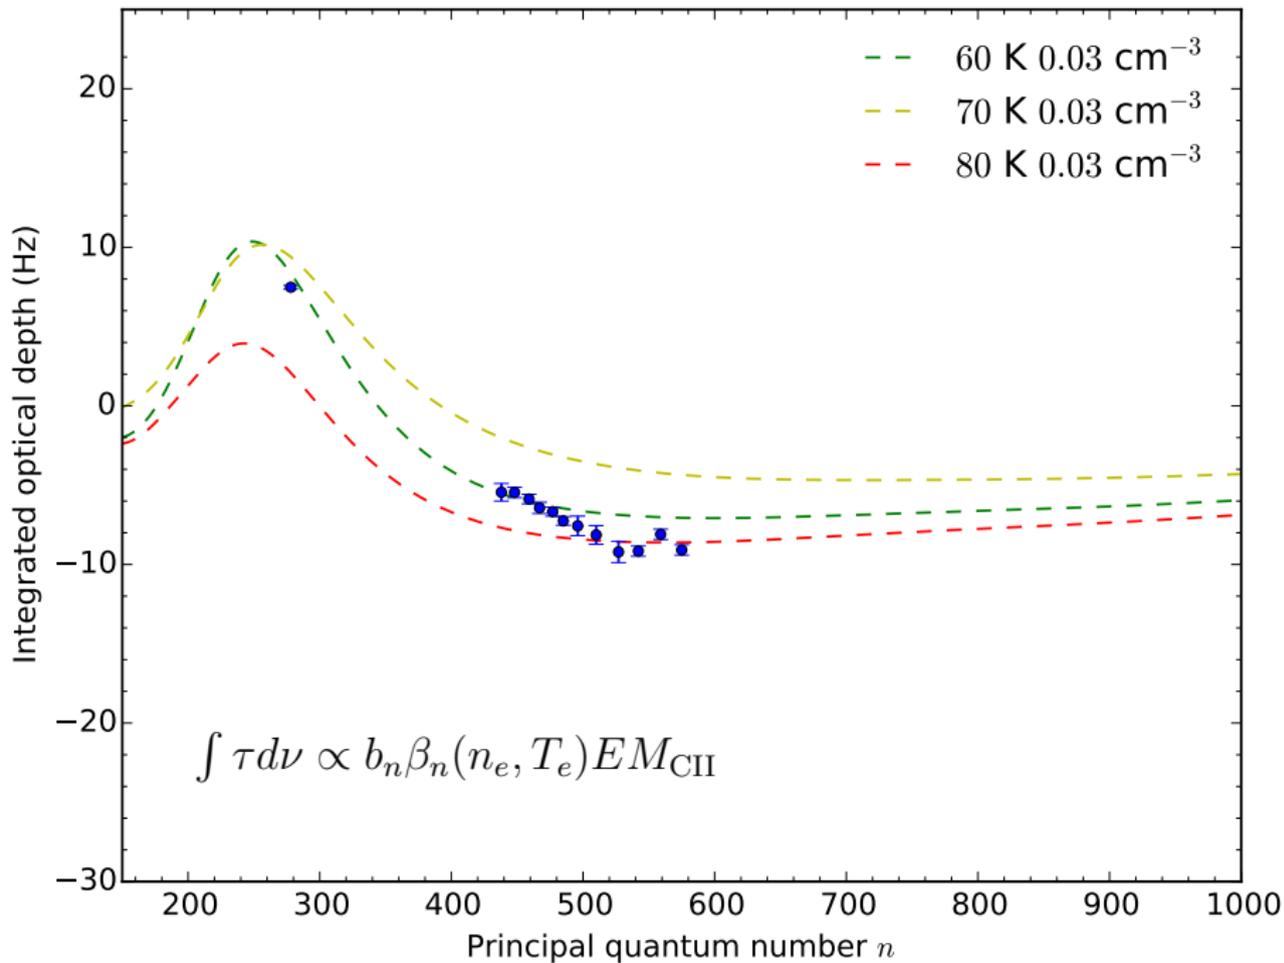

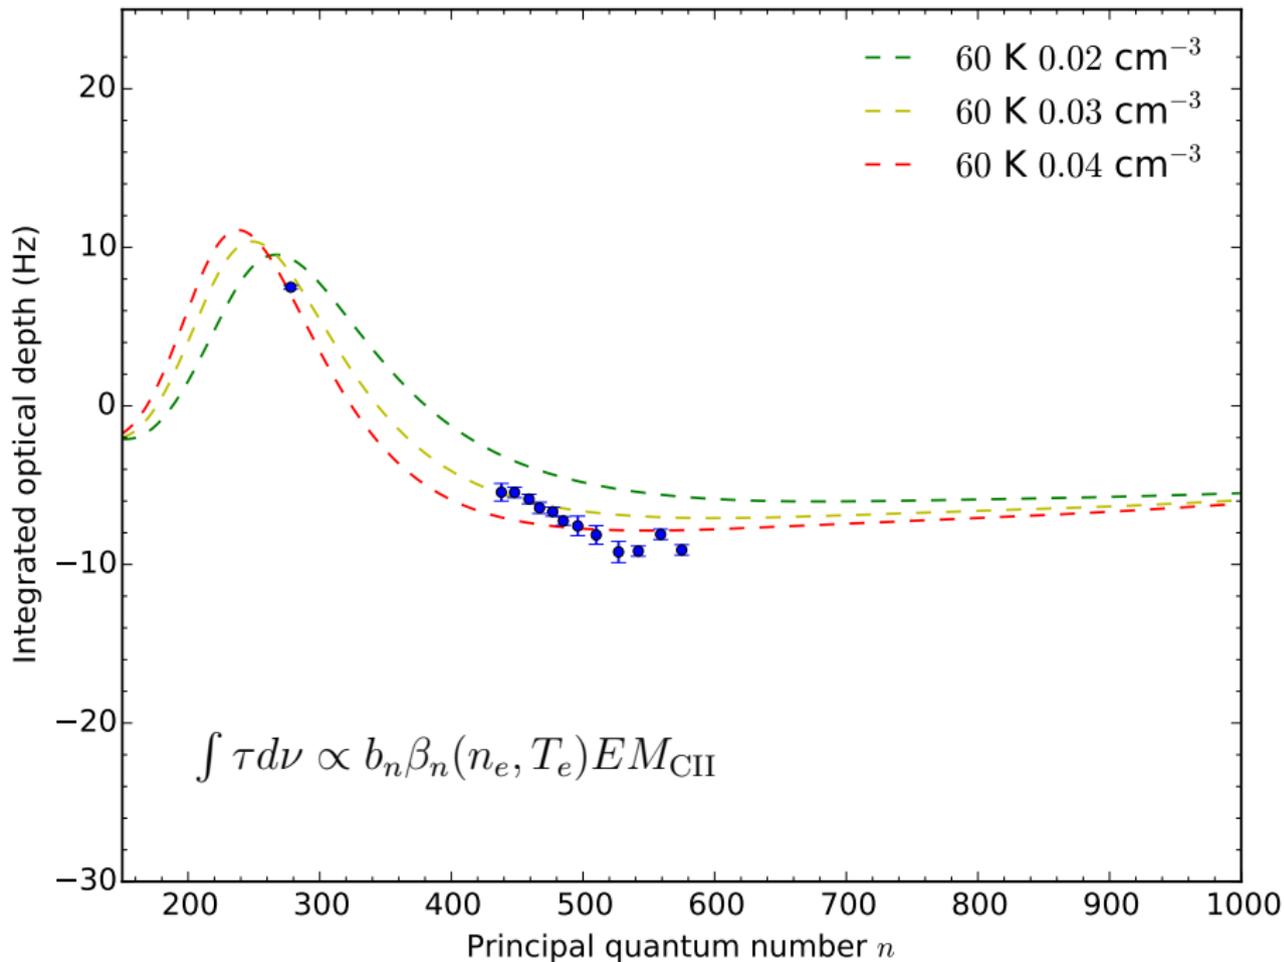

Kantharia et al. (1998)

Summary

- ▶ Low frequency RRLs trace the diffuse ISM towards Cas A.
- ▶ Line widths and integrated optical depths constrain: n_e , T_e , T_r and EM_{CII} .
- ▶ If $T_r = 0 \rightarrow T_e = 60 \pm 10$ K and $n_e = 0.04 \pm 0.01$ cm⁻³.

Work in progress

- ▶ Study spatial variations towards Cas A.
- ▶ Apply the technique to the galactic plane.

Thanks!
