DE605 Jülich Station - status
07 April 2016

DE605 - status

Station is working

- Recently: some LBAs repaired after storm damages
- 1 HBA oscillating: reason unclear, not yet fixed
- Ongoing problem: RFI due to airconditioning (?)

DE605 - status

Questions:

- Problem with air conditioning: also at other stations?
- Glow mode:
 - how does it work?
 - Is someone using the Jülich station?
 - Where is the data processing happening?
- How can we get access to the station? E.g., for monitoring etc.
- Inspiration for student projects in single station mode
