TOC:

1. [Debian GNU Linux 6.x](#)
2. [Ubuntu Linux 10.04 LTS](#)
3. [OpenSuSE 11.x](#)
4. [Fedora 15](#)

Debian GNU Linux 6.x

Most of the required external software packages can be installed via the package manager:

1. Packages essential for software development

```
apt-get install build-essential gfortran git-svn cmake subversion flex bison
apt-get install libblas-dev liblapack-dev libboost-all-dev
```

2. Scientific libraries

```
apt-get install libcfitsio3-dev
```

Ubuntu Linux 10.04 LTS

Most of the required external software packages can be installed via the package manager:

```
apt-get install build-essential gfortran git-svn cmake subversion flex bison swig
apt-get install libblas-dev liblapack-dev libboost-all-dev libfftw3-dev
apt-get install libcfitsio3-dev libgsl0-dev
```

OpenSuSE 11.x

Most of the required external software packages can be installed via the YaST package manager:

```
yast2 --install cmake git-svn subversion bison flex gcc-c++ gcc-gfortran
yast2 --install blas libblas3 lapack liblapack3 boost-devel
yast2 --install libcfitsio-devel gsl-devel
```

As an alternative it also is possible to run the installation through the zypper package manager:

```
zypper install cmake git-svn subversion bison flex gcc-c++ gcc-gfortran
zypper install blas libblas3 lapack liblapack3 boost-devel
zypper install libcfitsio-devel gsl-devel
```

Fedora 15

```
yum install cmake git-svn subversion gcc-gfortran libgfortran
yum install blas-devel lapack-devel boost-devel fftw-devel
yum install cfitsio-devel gsl-devel
```
