

# SSH Usage on CEP

## Generating keys

### Linux or OS X

The first thing you need to do is generate an authorisation key, which means you need to do the following once:

```
ssh-keygen -t rsa  
cp .ssh/id_rsa.pub .ssh/authorized_keys
```

Use cat or some editor if authorized keys already exists and can't be simply copied.

Detailed information on how to setup ssh agent forwarding can be found [here](#) and [here](#).
