

Installing Losoto in a Virtual environment

- Tested/installed on flits (@ ASTRON) and generic ubuntu 14.04

```
# install the following packtes (with apt-get, aptitude or so):
python-virtualenv libhdf5-serial-1.8.4 libhdf5-serial-dev

# First create a virtual environment
virtualenv losoto
# Enter the environment with the following command
source losoto/bin/activate
#re-install a number of packages
pip install numpy
pip install numexpr
pip install cython
#Download HDF5 and untar it
./configure --prefix=/home/user/bin/hdf5; make; make install
export LD_LIBRARY_PATH="/home/user/bin/hdf5/lib" and
HDF5_DIR="/home/user/bin/hdf5"
pip install tables
pip install progressbar
pip install matplotlib
```

- Next download ATLAS and lapack. You can get ATLAS from <http://sourceforge.net/projects/math-atlas/> and lapack from http://www.netlib.org/lapack/#_software. Untar ATLAS

```
mkdir -p ATLAS/BUILD; cd ATLAS/BUILD
../configure -b 64 -Fa alg -fPIC --with-netlib-lapack-
tarfile=/home/user/lapack-3.5.0.tgz --prefix=/home/user/bin/ATLAS/
make; cd lib; make shared; make ptshared; cd ..; make install
export ATLAS = <prefix dir>
pip install scipy
Download wcs and untar
./configure --prefix=/home/user/bin/wcs/; make; make install
./batchbuild.py --prefix=/home/user/bin/pyrap/ --lapack-
root=/home/user/bin/ATLAS/ --lapack-lib=/home/user/bin/ATLAS/lib --wcs-
root=/home/user/bin/wcs
```

- Finally, download losoto from <https://github.com/revoltek/losoto>
- You need to enter the virtual environment before running losoto. So run

```
source losoto/bin/activate
```
