

LOFAR User Software

This page will redirect you to build instructions for the LOFAR common software packages. Unfortunately there are two confusing names for two very different software bases:

- LOFAR Software → the package used and maintained by ASTRON containing control software, pipelines, Awlmager, AOFlagger; this is the package developed and elaborated and used in the LOFAR production environment
- LUS (LOFAR USer Software) → package maintained by the KSPs (Key Science projects) containing the pulsar pipelines tools, the Cosmic Ray tools, the Transient tools, etc.

LOFAR retrieve and build Instructions

- [Instructions for how to obtain and build the LOFAR software tree.](#)

LUS build instructions

- [LUS instructions \(not up to date...\)](#)
