

## LOFAR MSSS

### *Multifrequency Snapshot Sky Survey*

## Update

George Heald (MSSS Project Leader)  
(on behalf of the MSSS Team)  
LOFAR Status Meeting, 10/7/2013

- MSSS-HBA is now  $\sim 60\%$  complete!

## LOFAR Observation Database

### MSSS HBA

Number of Targets	3616
Number of Calibrators	8
Start Date	8 Feb. 2013
Stop Date	21 June 2013
Completed Fields	2078 (57.5%)
Information collected	24 June 2013

Show me the data »

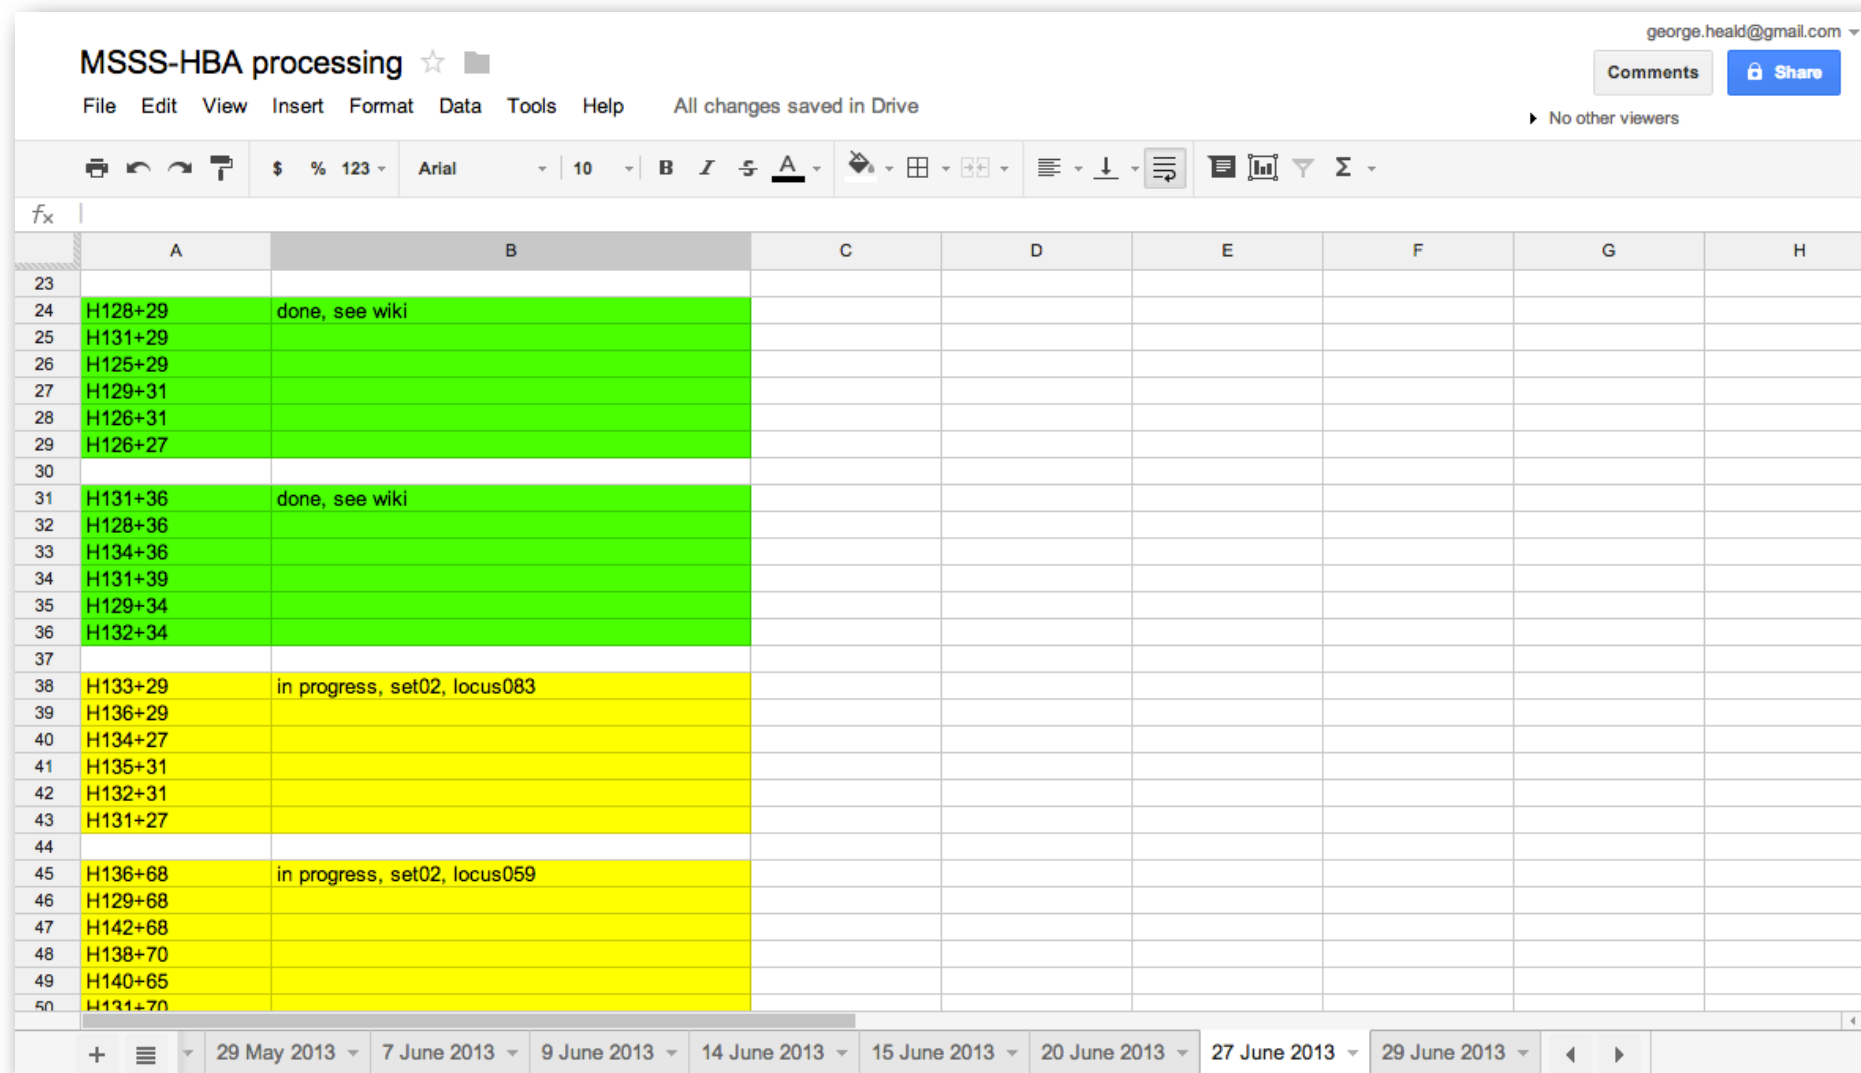

Hammer Projection

Map based on code from [this project](#).

Data available on CEP (7.3%)  
Data archived (50.2%)  
Partial data available (1.4%)  
Data missing (0.1%)  
Not yet observed (41.0%)

- Semi-automatic processing coordinated through google spreadsheet, we are typically 1-2 weeks behind the observations
- Take-home message: we have calibrated & imaged >50% of the northern sky at 120-160 MHz!
- But ... disk space now running short on MSSS nodes!

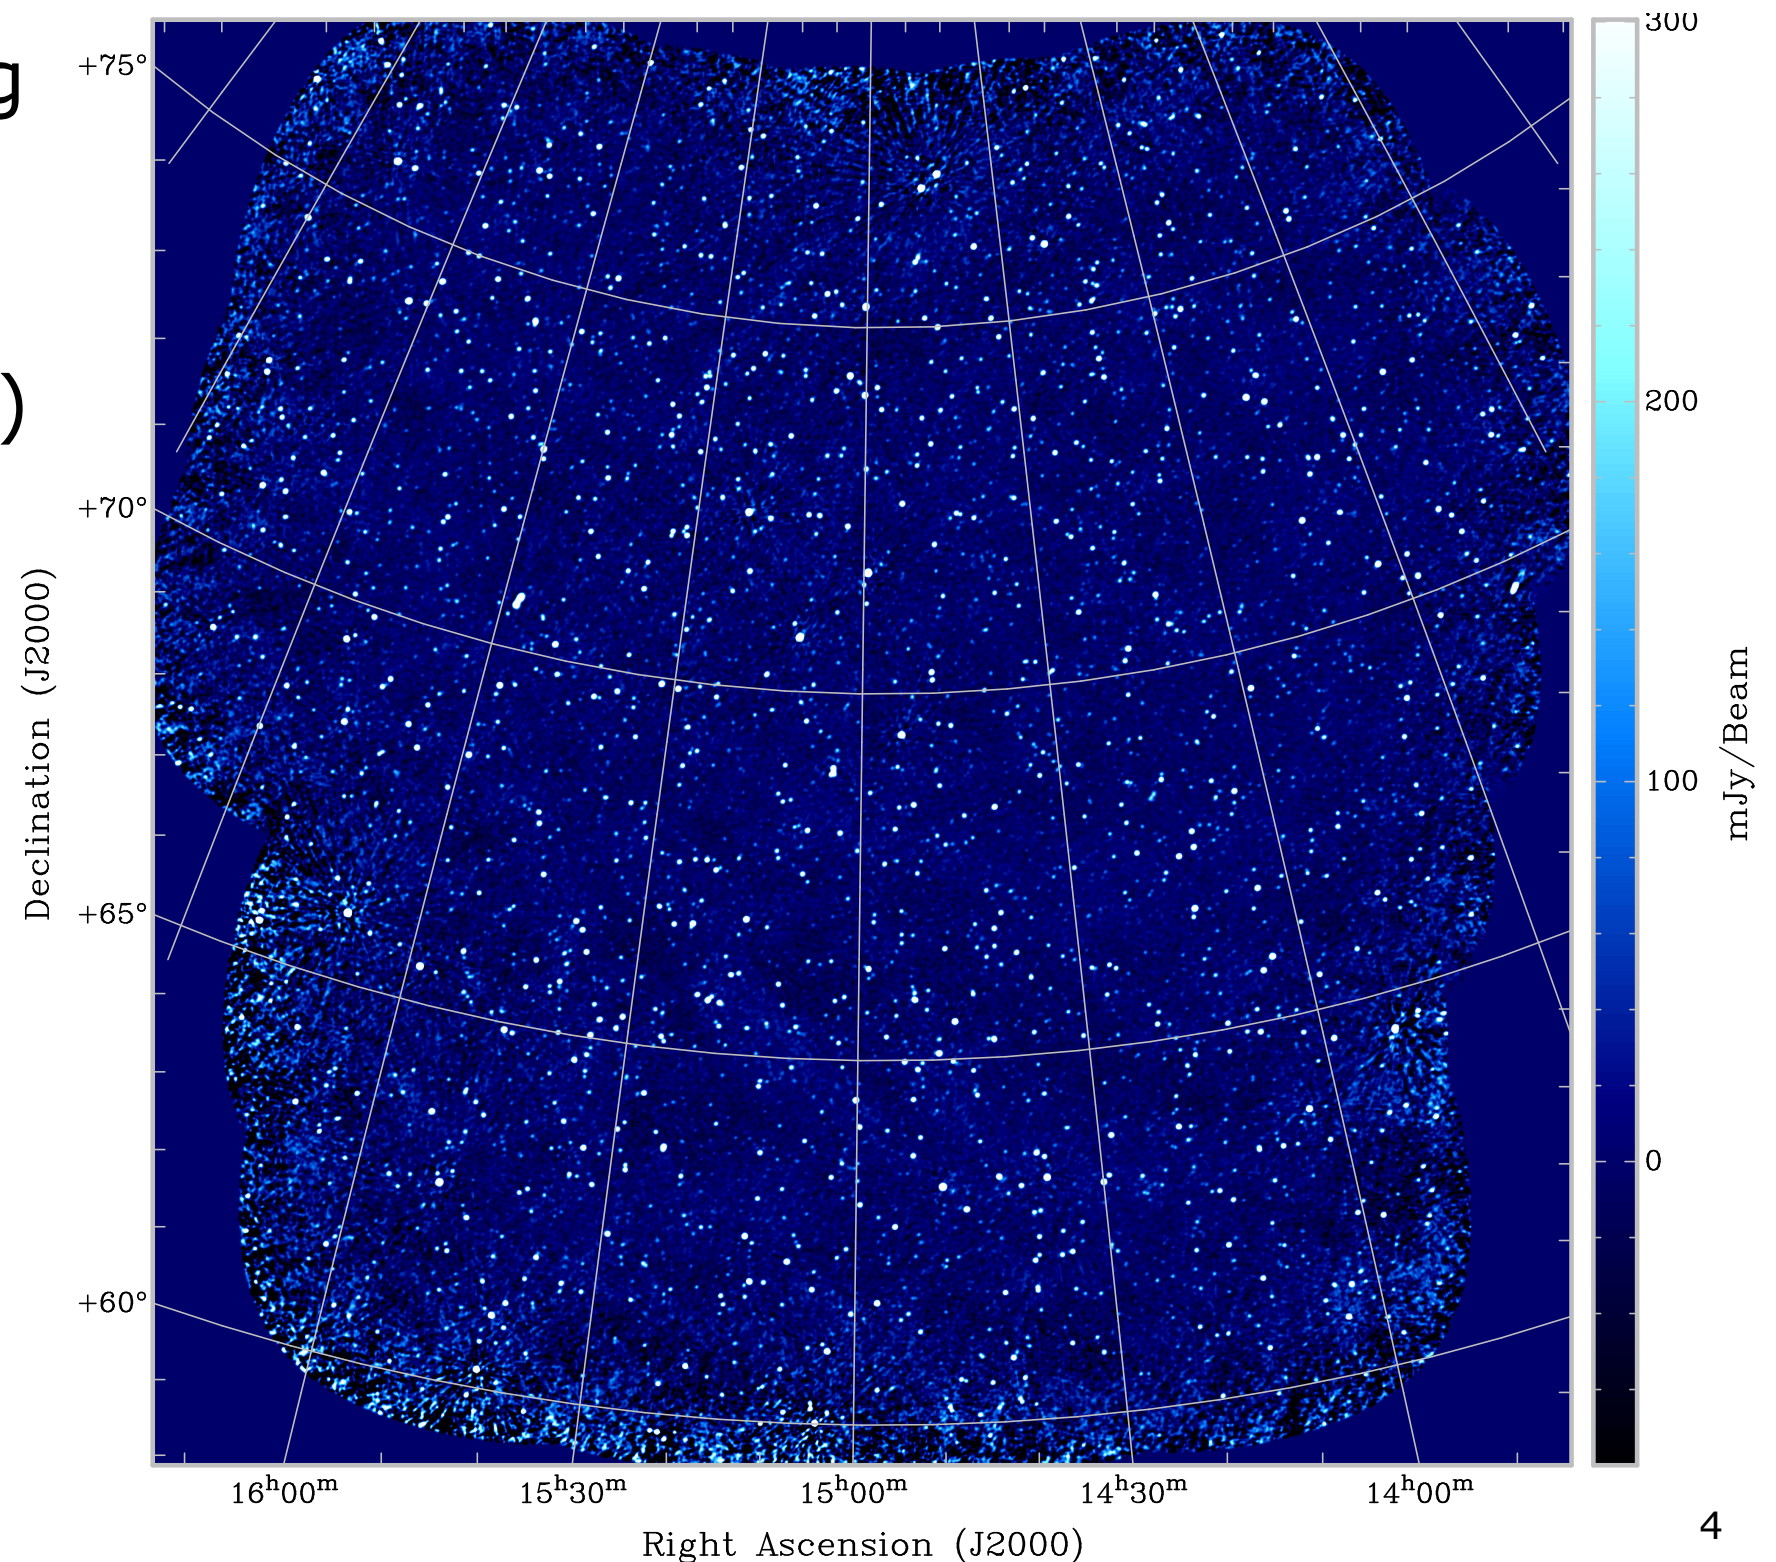

The screenshot shows a Google Spreadsheet with the following data:

	A	B	C	D	E	F	G	H
23								
24	H128+29	done, see wiki						
25	H131+29							
26	H125+29							
27	H129+31							
28	H126+31							
29	H126+27							
30								
31	H131+36	done, see wiki						
32	H128+36							
33	H134+36							
34	H131+39							
35	H129+34							
36	H132+34							
37								
38	H133+29	in progress, set02, locus083						
39	H136+29							
40	H134+27							
41	H135+31							
42	H132+31							
43	H131+27							
44								
45	H136+68	in progress, set02, locus059						
46	H129+68							
47	H142+68							
48	H138+70							
49	H140+65							
50	H131+70							

- Recent progress in coordinated & consistent PyBDSM and PySE strategy for creating high-quality catalog
- Intermediate catalog has 1564-1581 sources per band (1470 in all 8 bands)
- Applied to 32-field mosaic (MVF)
- Re-calibration now underway
- Will lead to final images for MSSS overview paper

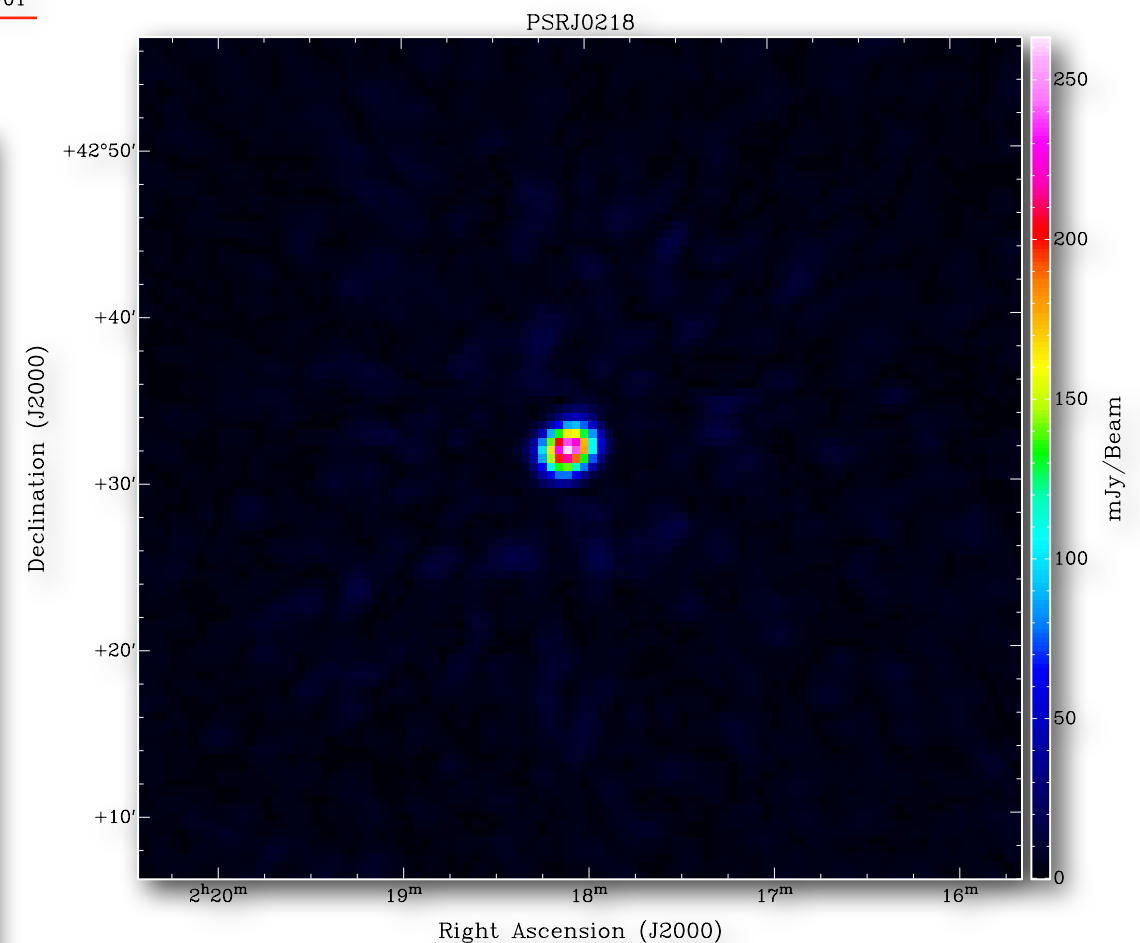

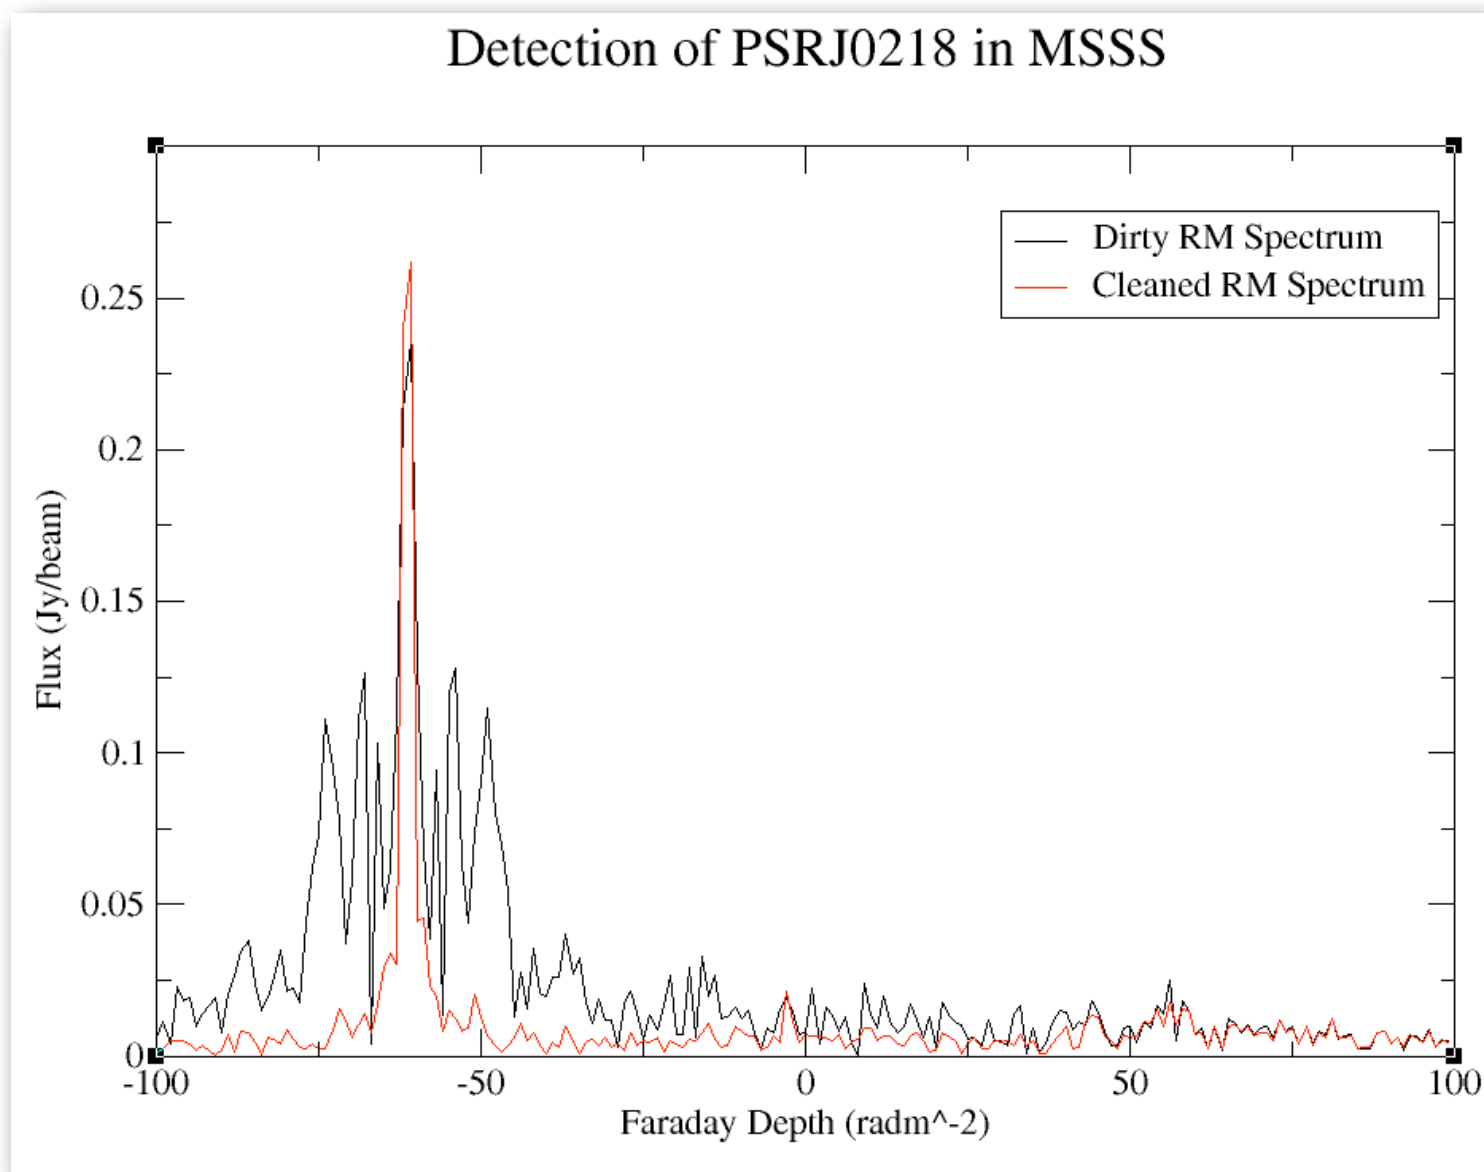

- Data recalibrated by Martin Hardcastle; full-bandwidth image  $<2'$  resolution with 10 mJy/beam rms noise level

- Polarized pulsar (PSRJ0218) detected with MSSS image data!
- 51% polarized, and with correct RM of  $-61 \text{ rad m}^2$  (ionospheric RM correction was applied to the data)

FARDEPTH:  $-6.100000\text{e}+01$

**David Mulcahy**

- Direction independent gain stability substantially improved thanks to Bas van der Tol, Andra Stroe, and Jeremy Harwood
- Plot below shows gain solutions, illustrating effect of solving for CommonRotationAngle (bottom) or not (top)
- Next step: use these to obtain robust direction dependent gains (with existing script) and apply in *awimager* (stay tuned)
