

LTA status

Adriaan Renting
Lofar Status Meeting

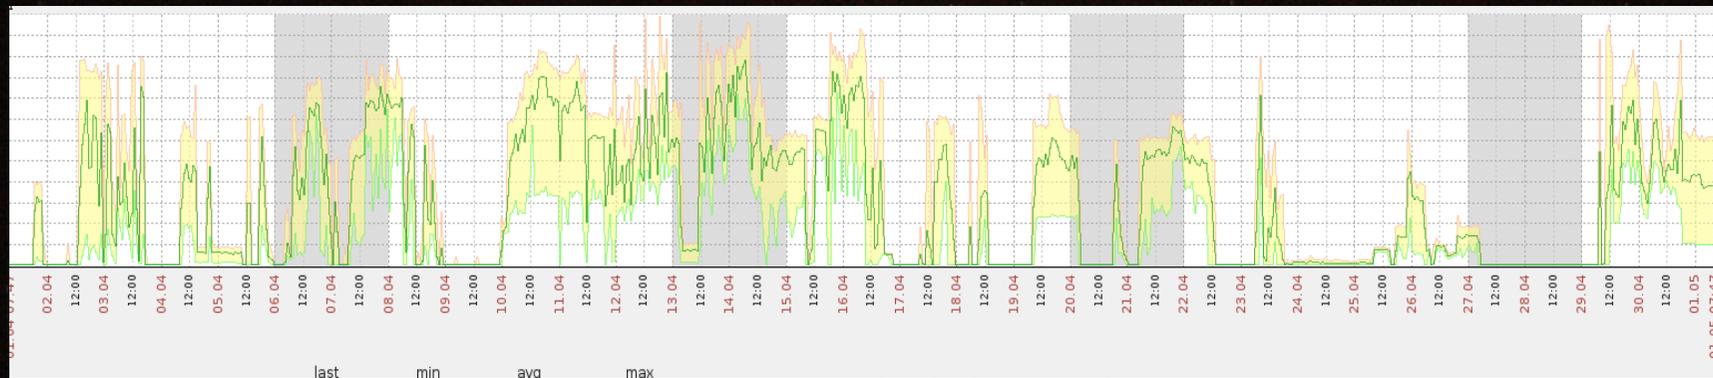

1 May 2013

April results

Data transferred to the LTA: ~ 370 TB + ~ 150 TB EoR
Data staged/retrieved from the LTA: ~ 100 TB + EoR
- Staging of really large datasets is straining the system.

Storing Beamformed data tested and operational.
Uptime: An interruption in the last weekend and some smaller problems. About 50% better than in March.

May prognosis

More speed improvements in moving data to the LTA.

More robustness in handling metadata problems.

Easier user interface for selecting large amounts of data to be staged/retrieved.
