

## COBALT

## Project Update

R.J. Nijboer

# Summary of Progress

ASTRON

- What happened since last LSM?
  - Week 1
    - First ‘Pulsar detection’ in Incoherent and Coherent mode
    - First Correlator Production run
  - Week 2
    - (Hardware) system performance severely degraded

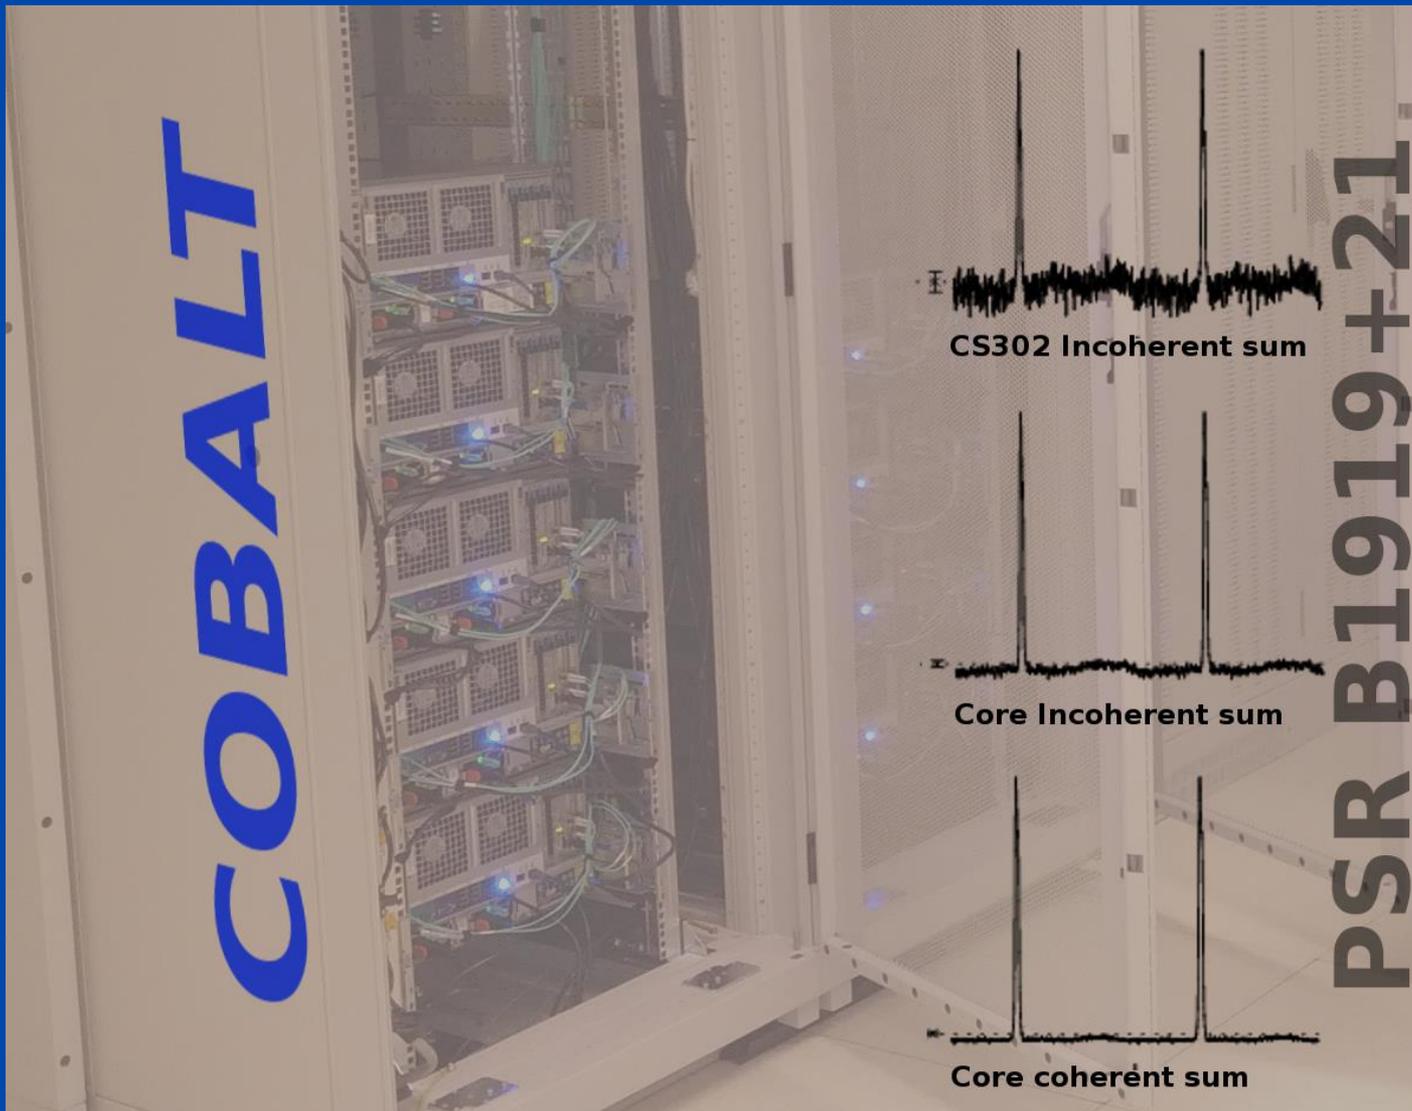

# Correlator Mode

- First Production run done
  - 3C196 for EoR project
  - Data quality looks good, waiting for high DR image
    - Data still being transported to EoR cluster
- To be done
  - Final check on full pipeline: observing, correlating, post-processing, archiving
  - Broken antenna info in MS

# Beamformed mode

# Beamformed Pipeline

- Functional correctness of
  - Incoherent Stokes
  - Coherent Stokes (in phase center)
  - (can be used combined)
- To be done
  - Testing of performance improvement
  - Testing multiple TABs
    - TAB rings to be implemented
  - Testing Complex voltages
  - Testing IQUV
  - Integration / production testing

# Fly's Eye mode

- Test runs performed
- Bugs fixed
- To do: testing improved performance (same as BF)

# Questions?
