

## LOFAR CITT

### *Calibration & Imaging Tiger Team*

George Heald (CITT PI)

LSM, 13/5/2015

- CITT updates: personnel and progress
- Developments on direction dependent calibration
- Example: NGC 5775 (with early science results!)

# CITT members and roles

George Heald  
*PI*

Tammo Jan Dijkema  
*Project Manager  
Calibration tools*

Bas van der Tol  
*LOFAR Imager*

**CITT Mid-year Progress Workshop, 2014**

Nicolas Vilchez  
*Selfcalibration pipeline*

David Rafferty  
*Ionospheric calibration*

Stefan Fröhlich  
*HPC consultant*

Tim Shimwell  
*Calibration & surveys*

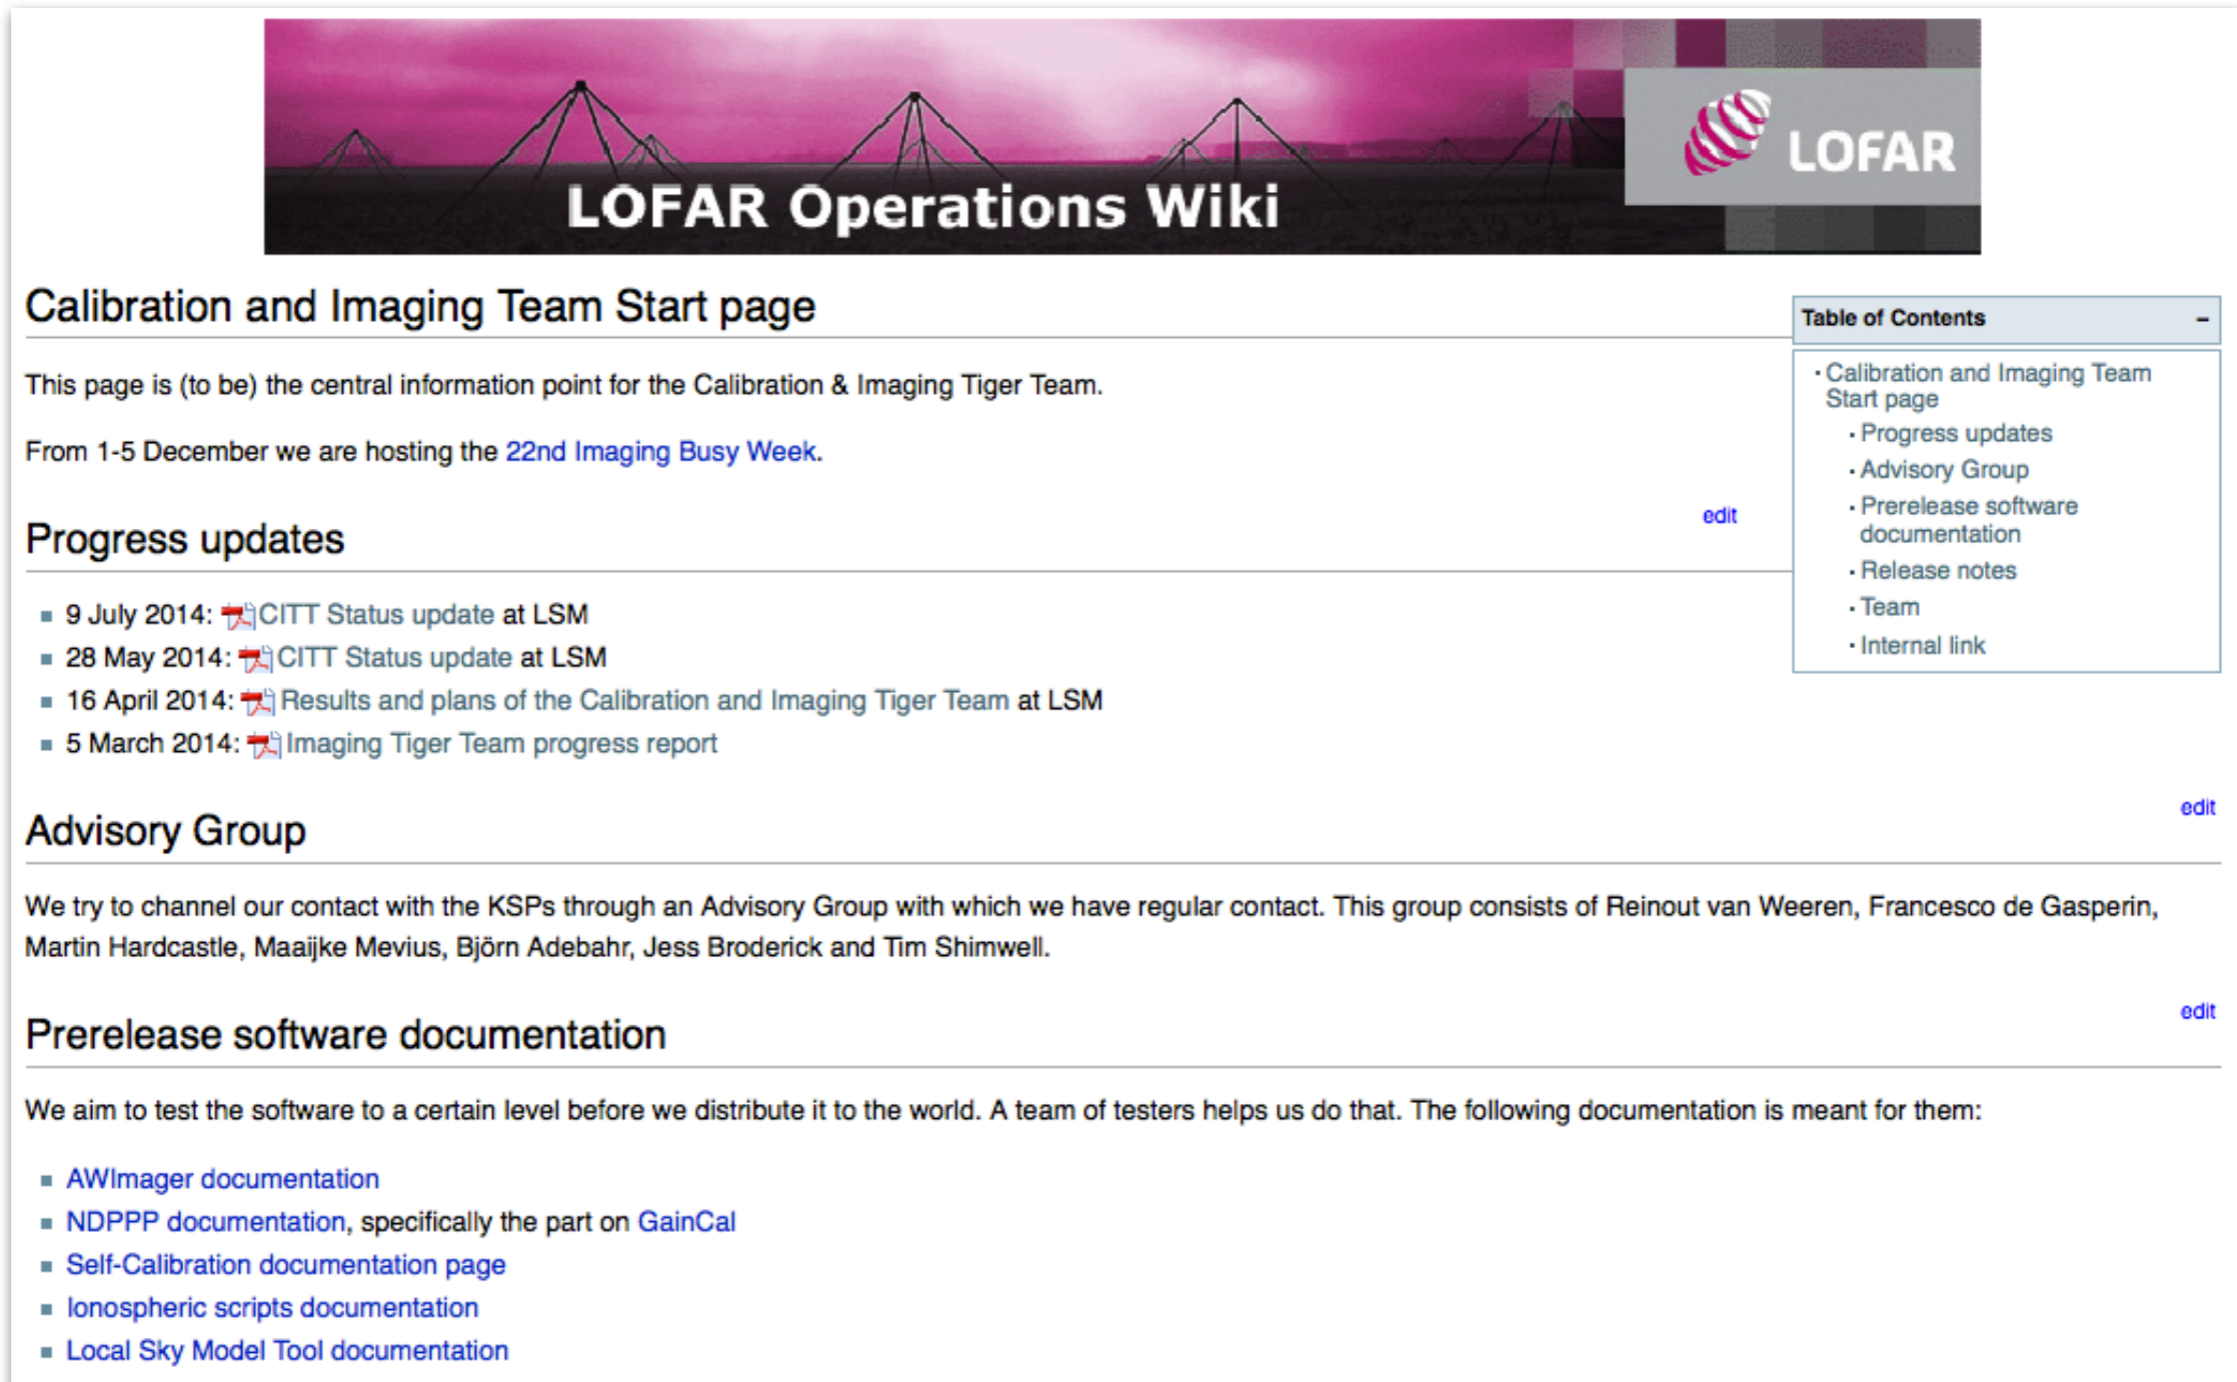

Manu Orru &  
Carmen Toribio  
*RO Liasons*

- Calibration in NDPPP/BBS
  - Demonstrated huge speedup (40x) and memory usage improvement
  - **Delivered substantially improved capability in NDPPP**
- Imaging in awimager [**critical path**]
  - improvements to feature set through build against casa 4.2
  - acceleration development well under way
  - **Delivered fully functional imager in new build**
- Self-calibration recipe [now being finalized in operational (RO) pipeline]
  - direction-independent: standalone and pipeline implementation
  - development of direction dependent version well under way
  - **Delivered functional selfcal pipeline [available on github]**
- Ionospheric / direction-dependent calibration (BBS+awimager)
  - Decision taken to transition from phase screen to extreme peeling
  - **Delivered essential components of direction dependent pipeline**

- Smart demixing
  - Required for good quality HBA data to enter the pipeline
  - New scheme not yet verified
  - Testing started with new dataset (Horneffer)
- Beam model adjustments
  - For now, normalization (HBA flux scale)
  - Further improvements will need commitment at ASTRON
- Continued support of software packages (BBS etc), ~20% time
- Fast rollout of improvements to the community
  - e.g. gaincal, awimager, support of LoSoTo, LSM tool, ...
- Engagement with the RO to implement software in operational system (in progress: e.g. selfcal - later, pipeline structure)
- Support release of casacore 2.0 (now for NRAO and LOFAR)

- Documentation can always be improved, but we've kept usage information up to date as we move along (cookbook & wiki):

The screenshot shows the 'LOFAR Operations Wiki' page. At the top, there is a banner with the text 'LOFAR Operations Wiki' and the LOFAR logo. Below the banner, the page title is 'Calibration and Imaging Team Start page'. The main content area contains the following sections:

- Calibration and Imaging Team Start page**: This page is (to be) the central information point for the Calibration & Imaging Tiger Team. From 1-5 December we are hosting the [22nd Imaging Busy Week](#).
- Progress updates**:
  - 9 July 2014: [CITT Status update at LSM](#)
  - 28 May 2014: [CITT Status update at LSM](#)
  - 16 April 2014: [Results and plans of the Calibration and Imaging Tiger Team at LSM](#)
  - 5 March 2014: [Imaging Tiger Team progress report](#)
- Advisory Group**: We try to channel our contact with the KSPs through an Advisory Group with which we have regular contact. This group consists of Reinout van Weeren, Francesco de Gasperin, Martin Hardcastle, Maaijke Mevius, Björn Adebahr, Jess Broderick and Tim Shimwell.
- Prerelease software documentation**: We aim to test the software to a certain level before we distribute it to the world. A team of testers helps us do that. The following documentation is meant for them:
  - [AWImager documentation](#)
  - [NDPPP documentation](#), specifically the part on [GainCal](#)
  - [Self-Calibration documentation page](#)
  - [Ionospheric scripts documentation](#)
  - [Local Sky Model Tool documentation](#)

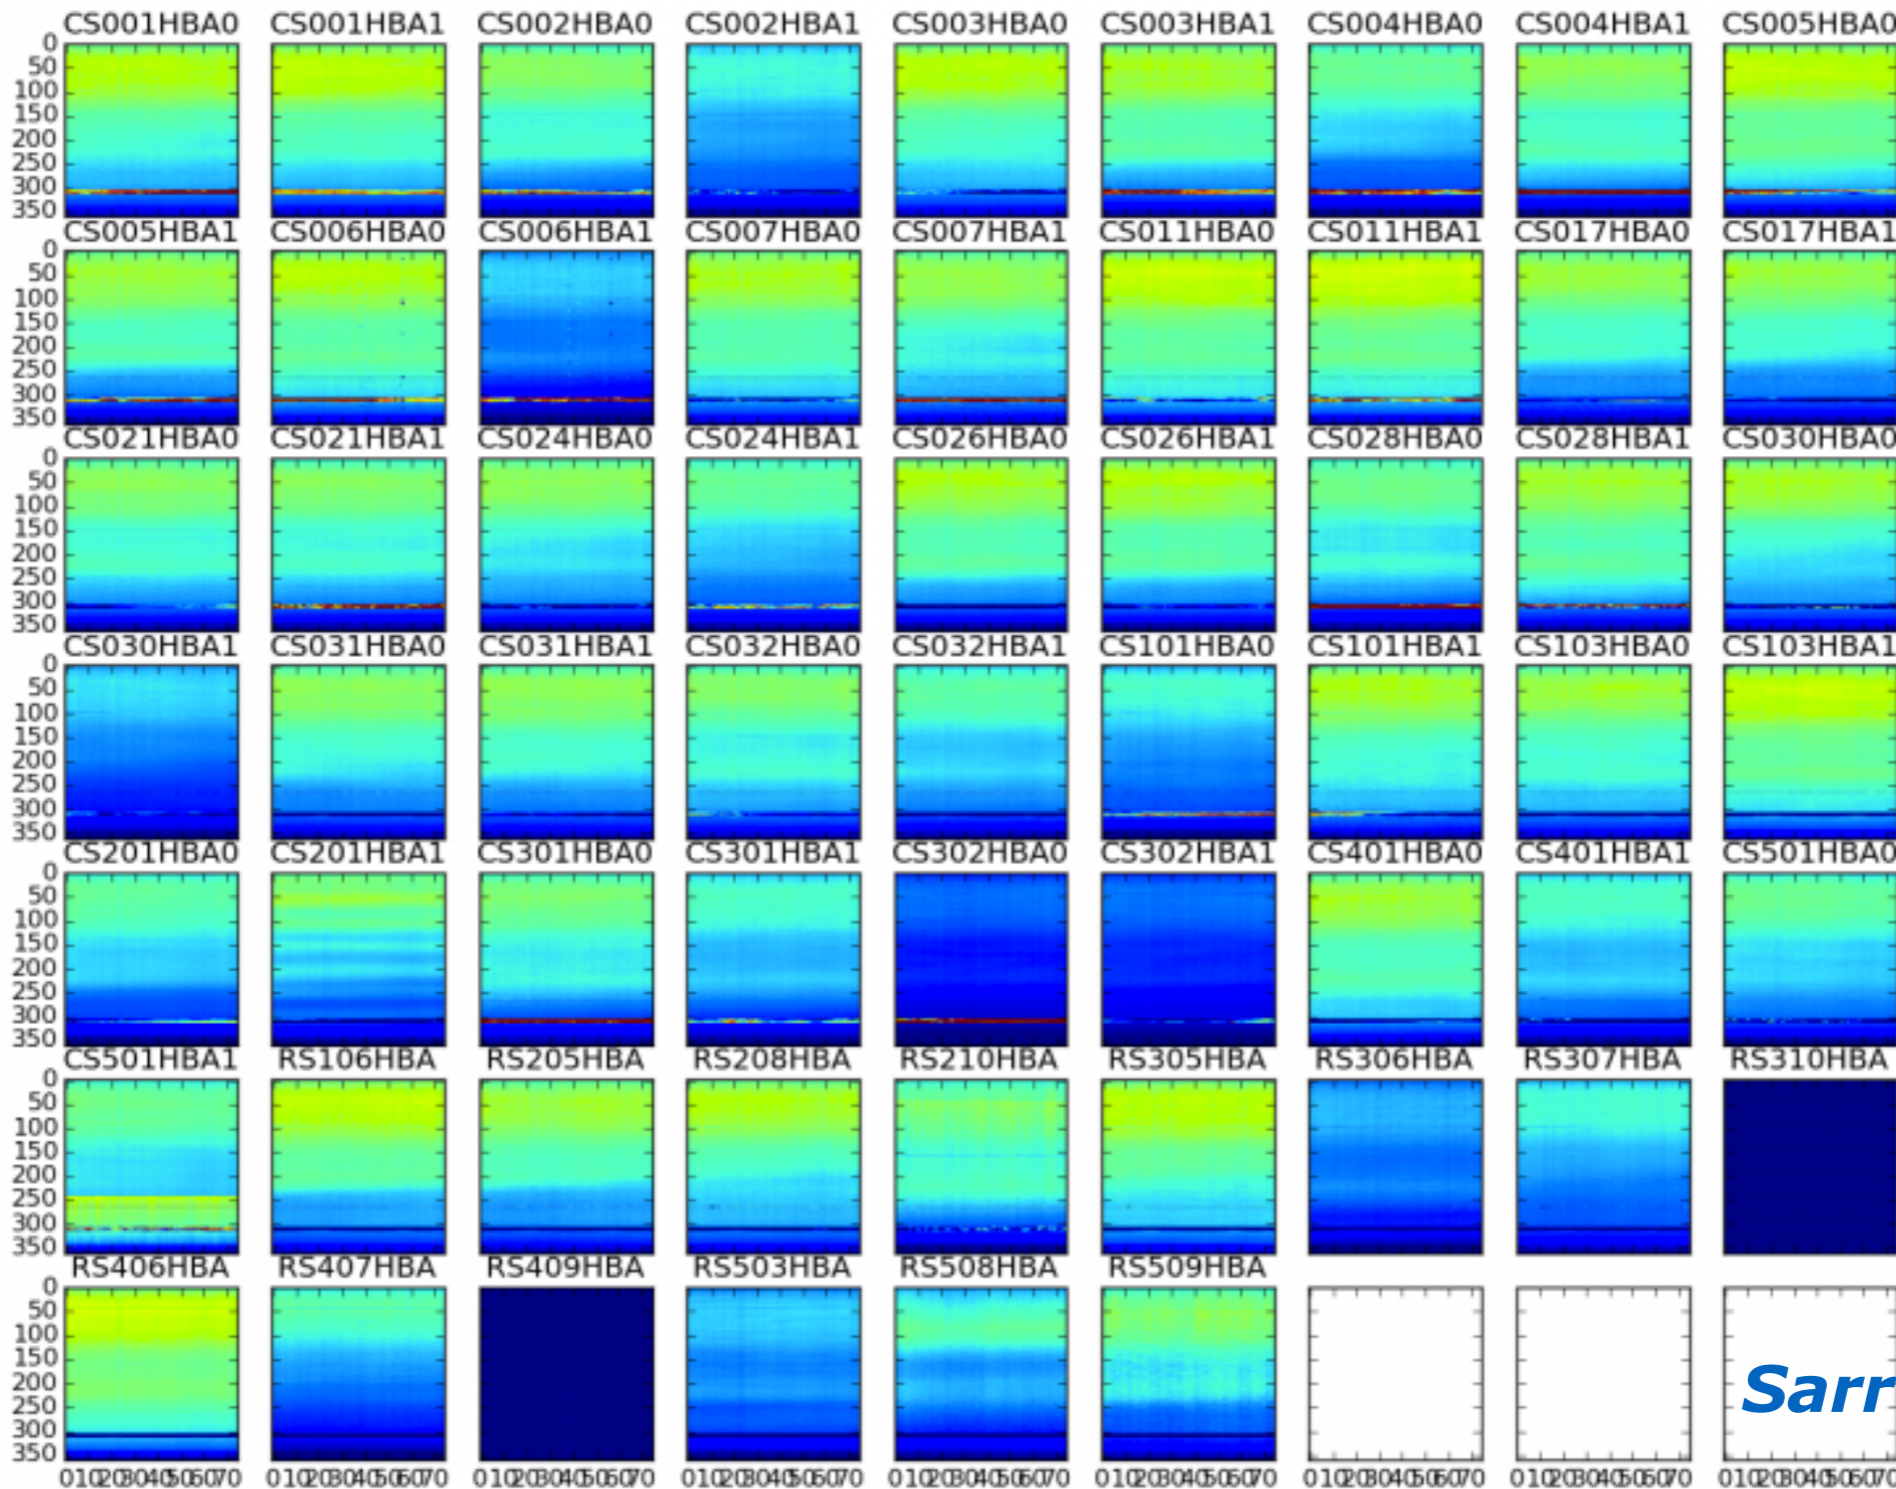

On the right side of the page, there is a 'Table of Contents' box with the following links:

- Calibration and Imaging Team Start page
- Progress updates
- Advisory Group
- Prerelease software documentation
- Release notes
- Team
- Internal link

- (Data school book will mention aspects of the new software too)

- Pipeline development framework has been added to our portfolio
- Development of enhanced gridding/degridding
  - NB: this is a change from plans for multi-node approach
  - 3 months for CPU implementation of Bas's new algorithm
  - 3 months for GPU version (Bram Veenboer)
  - "plug and play" nature of new imager (gridder/degridder and beam modules) is key for rapid development toward end of the CITT project
- Planning for what comes after CITT
  - End of current project in August
- Emphasis on "facet calibration" in pipeline development
  - **see recent LSM presentations by van Weeren & Williams**

- Careful initial inspection and processing is being coordinated in preparation for the extreme peeling testing next month

*Sarrvesh*

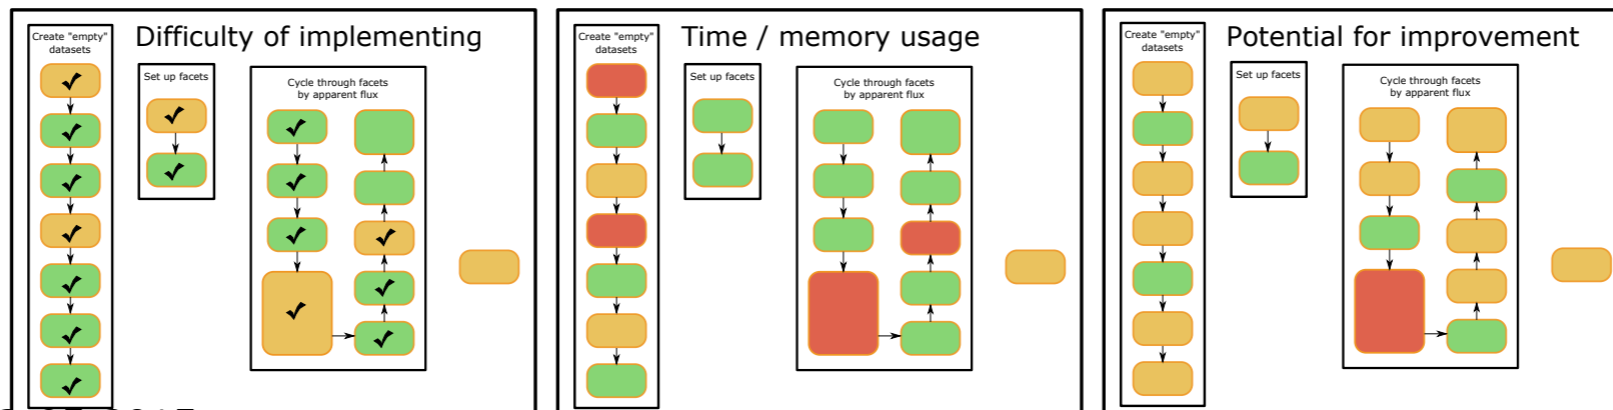

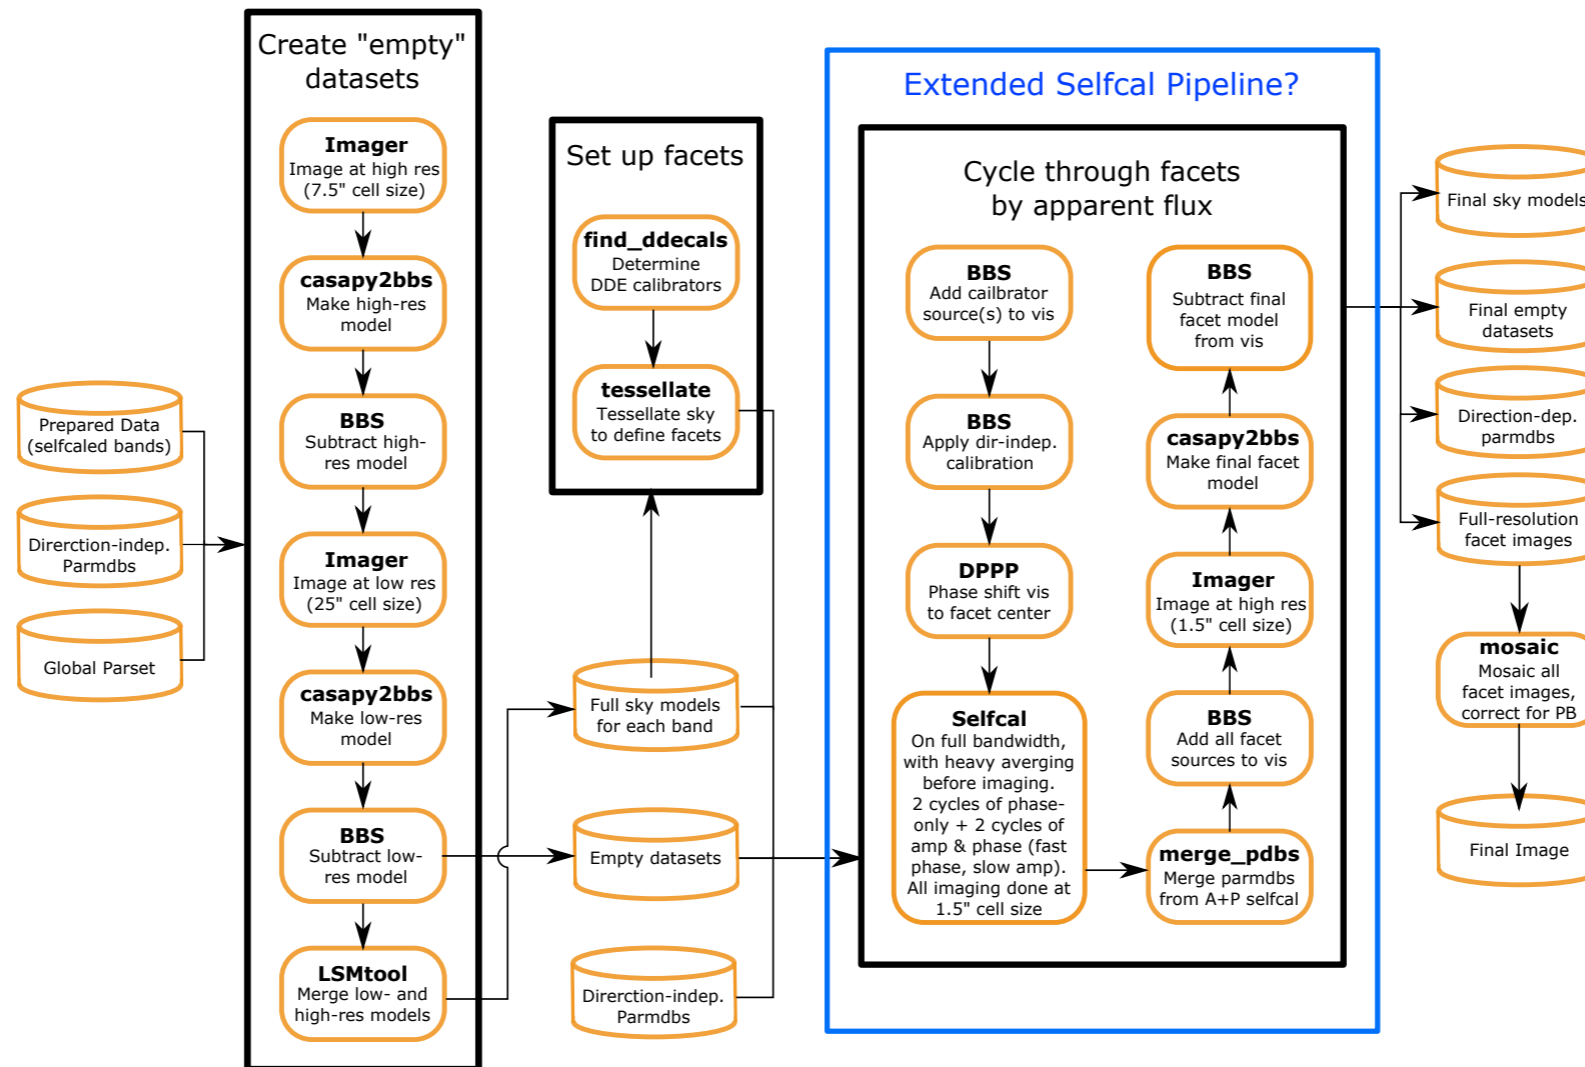

# Clock-Tec separation

- All core stations are on the same clock
- Note both clock offset and clock drift are present

- Mature development of facet cal in LOFAR pipeline framework
- Preparatory steps also implemented in framework (Tim Shimwell)

*van Weeren*

- Organizers: Tim Shimwell, Reinout van Weeren & Wendy Williams
- 20-24 April at Leiden University
- Participants (fields / development):
  - Wendy Williams (Boötes)
  - George Heald (NGC 5775)
  - Martin Hardcastle (H-ATLAS NW)
  - Sarrvesh Sridhar (M101)
  - Elizabeth Mahony (Lockman Hole)
  - Jose Sabater Montes (ELAIS-N1)
  - Tim Shimwell (A2034)
  - Reinout van Weeren (A2256)
  - Duy Hoang and Edwin Retana Montenegro (Boötes)
  - Francesco de Gasperin (Toothbrush cluster; LBA)
  - David Rafferty & Stefan Fröhlich (CITT pipeline / framework)
  - Tammo Jan Dijkema (NDPPP / general development support)

- Development scripts improved, generalized, made easier to use
- Shift from casa imager to wsclean for speed enhancement
- Development version continues to evolve on github repository
- (Early) analysis of source flux densities: stable within FWHM
  
- Meanwhile: CITT version (based on LOFAR pipeline framework) made more robust; automated aspects underway
  
- Soon: NDPPP to replace BBS for faster calibration steps

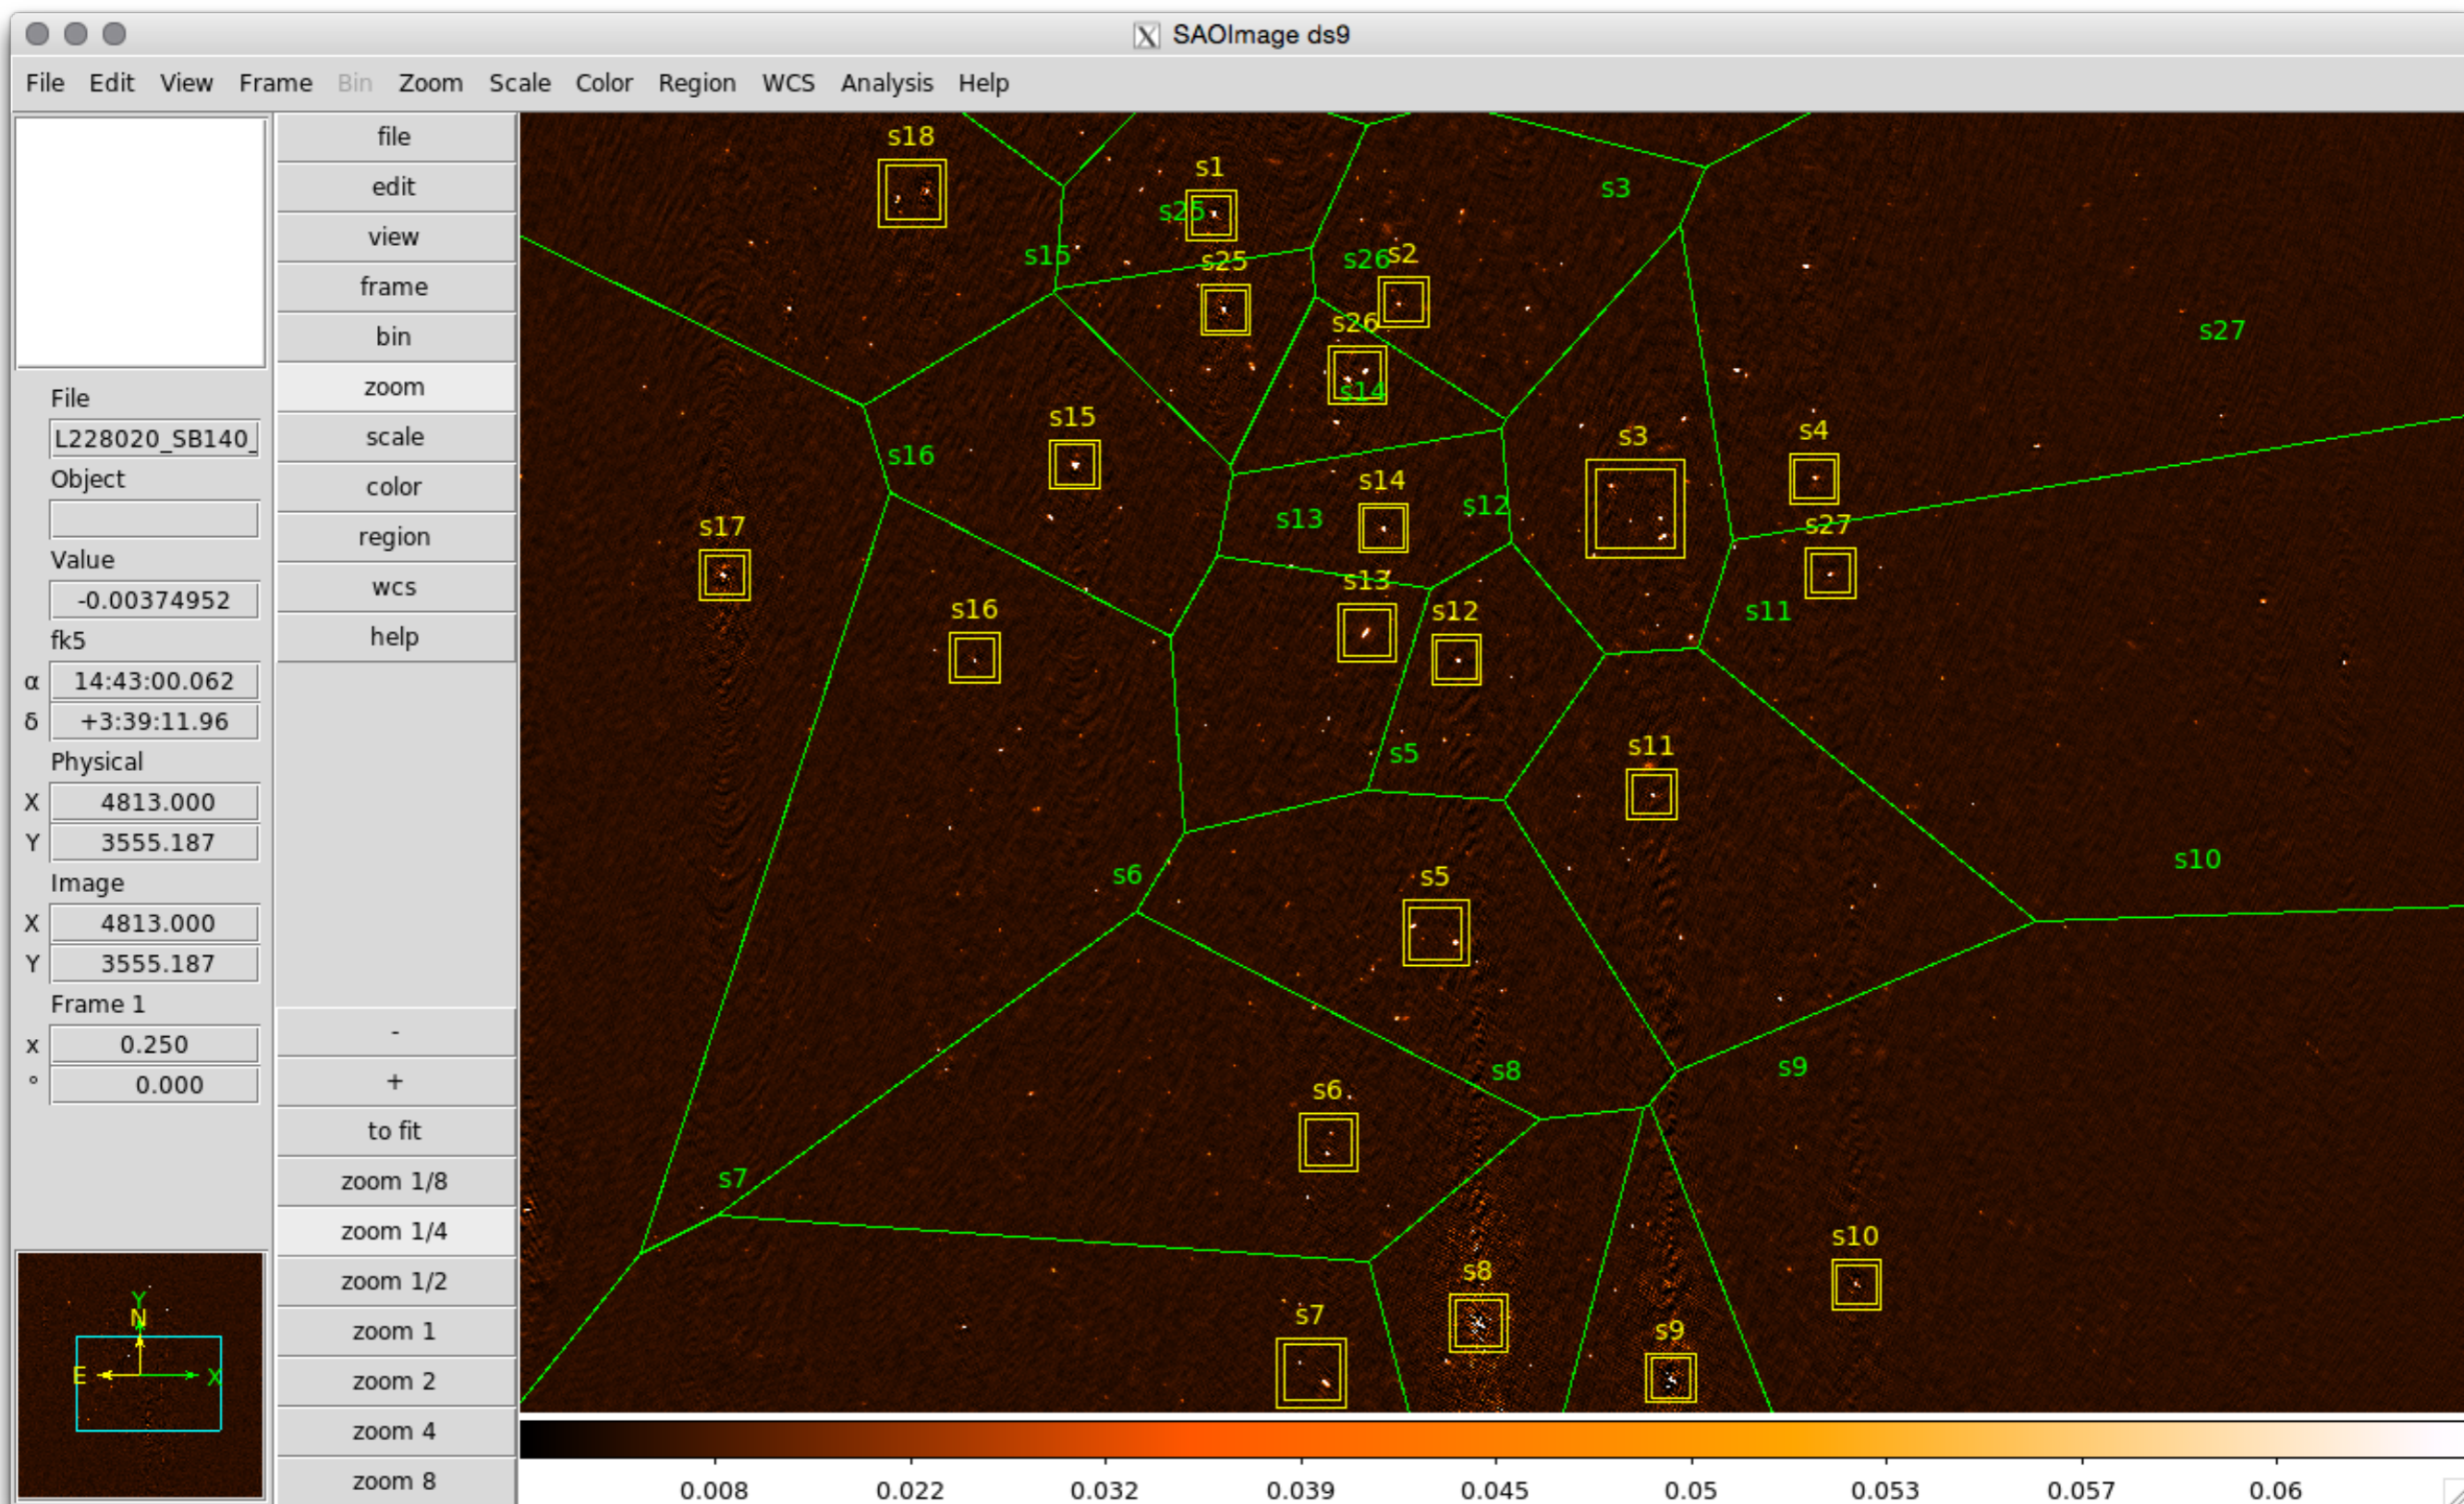

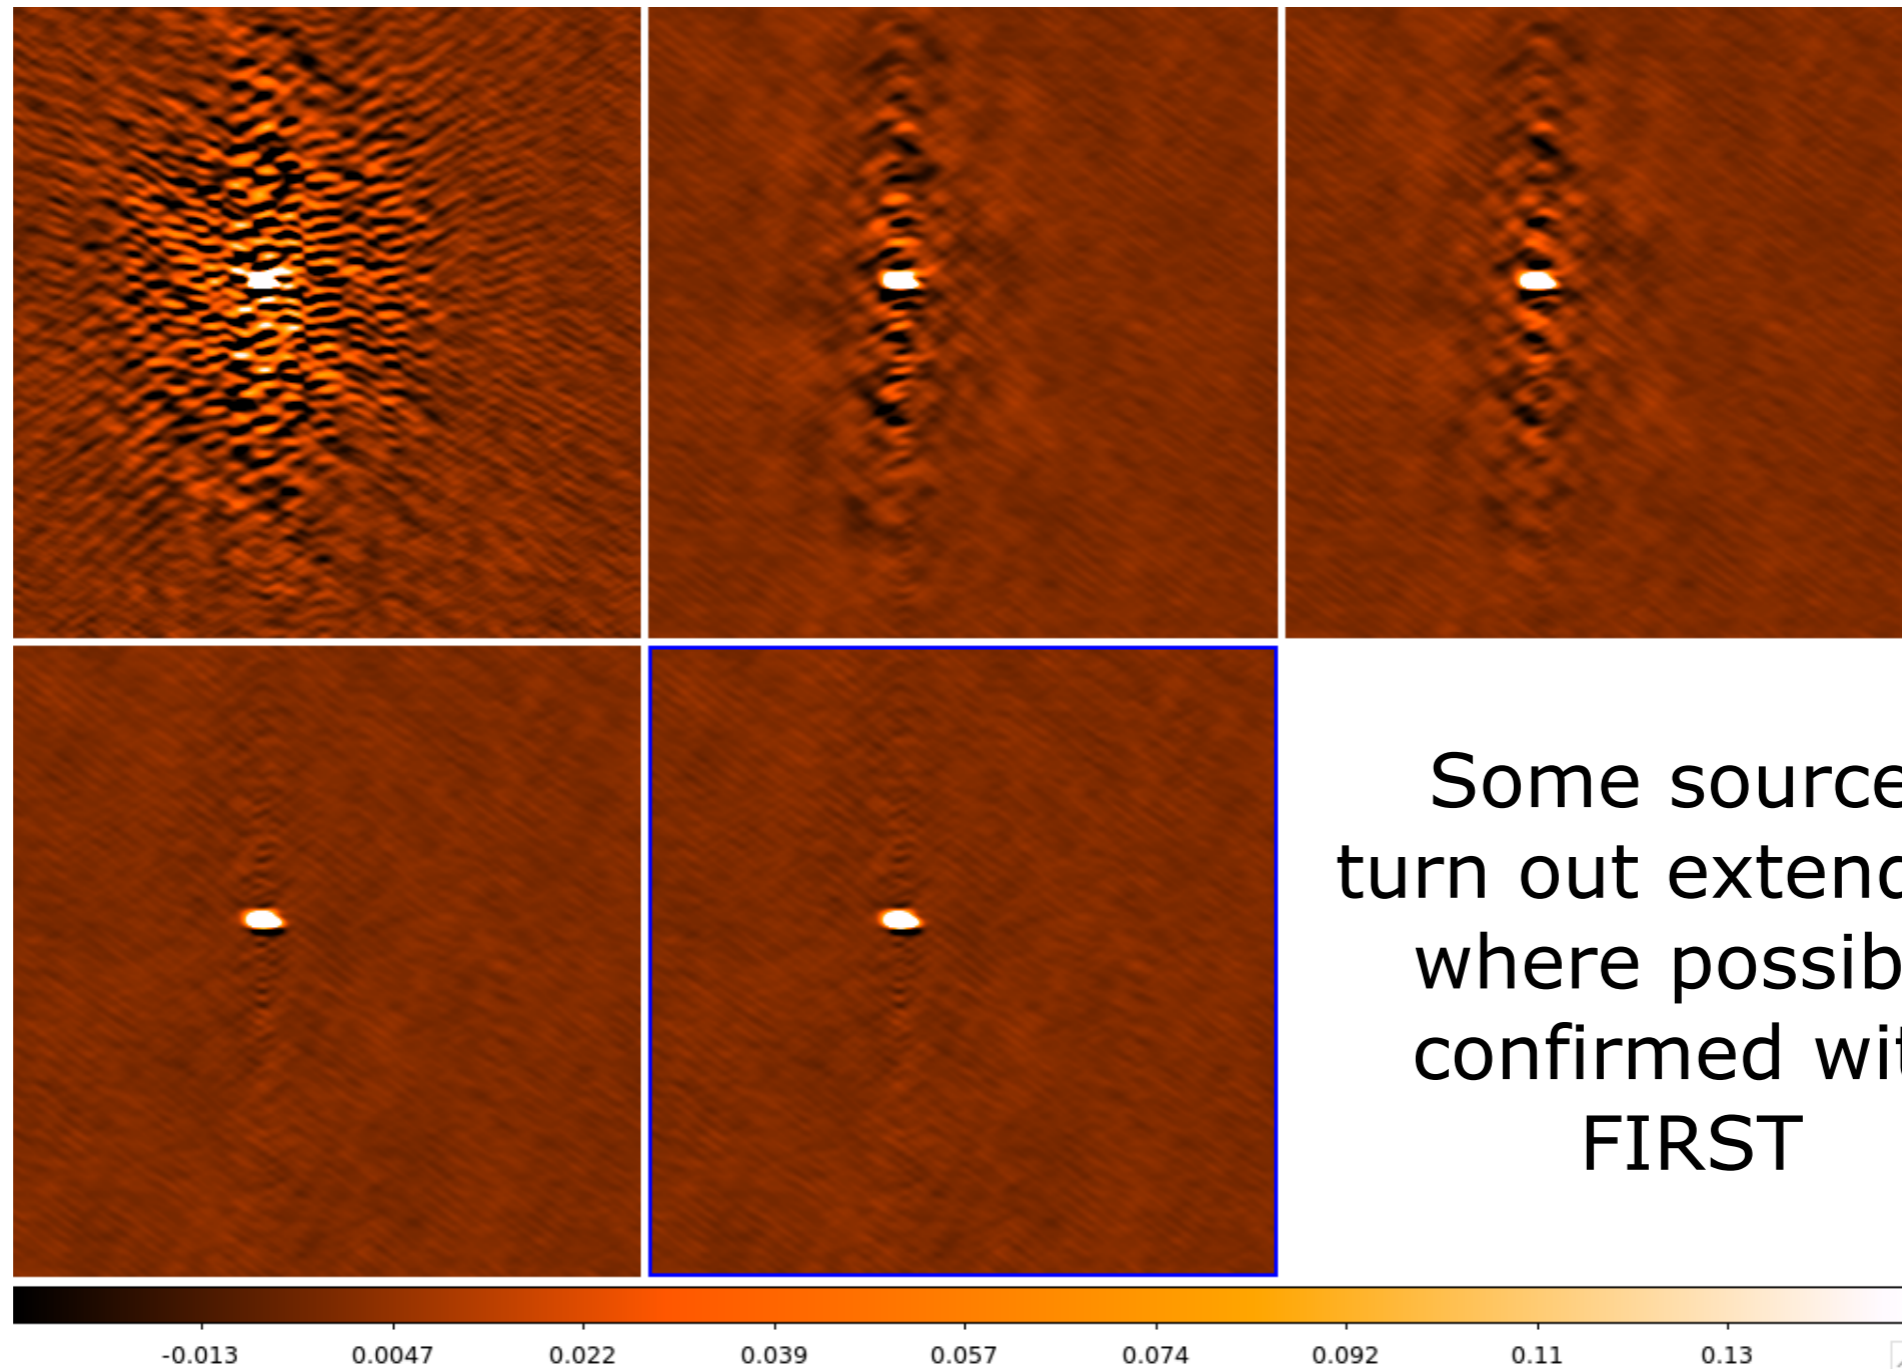

# Example: NGC 5775

Divide up the sky into multiple facets

# 4C +05.61 (Peak: 1.6 Jy)

Some sources  
turn out extended;  
where possible  
confirmed with  
FIRST

university of  
 groningen

ASTRON

(only a few facets complete)

# NGC 5775

- Data: 4 hours and 50 sub bands (1/12th of the entire dataset)
- Contours: 2, 3, 5 and 10  $\sigma$

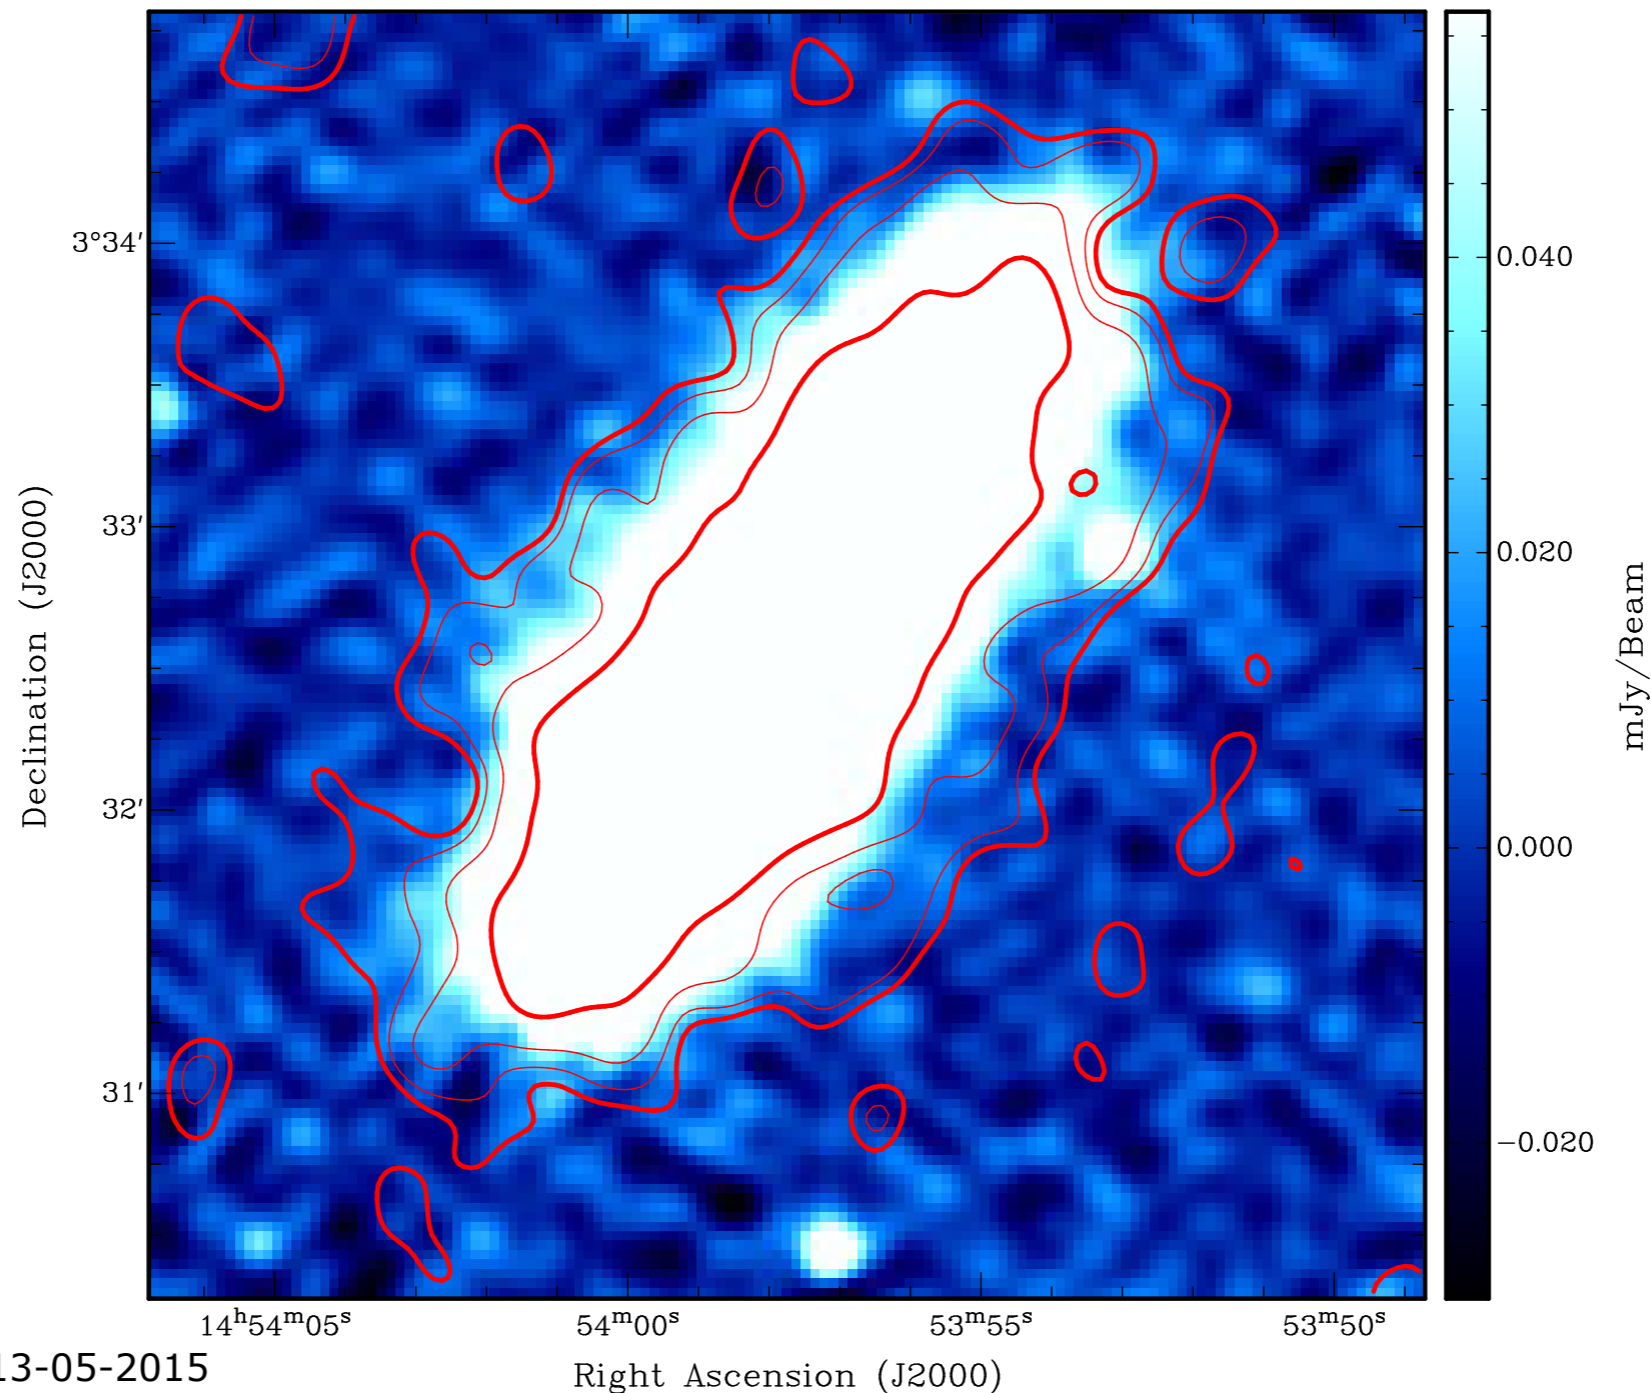

H $\alpha$  Image: Rich Rand

university of  
 groningen

ASTRON

- Same contours as previous slide
- Compared with CHANG-ES (Irwin et al 2012) image (VLA C-band, D-array, 10" resolution, rms 6  $\mu$ Jy/beam)

- Preliminary analysis of vertical scale heights
