LOFAR Status Meeting, Dwingeloo/Bonn, 23 March 2011

Crab observations: polarisation and RFI from aircraft

- polarisation of the crab pulsar
 - ★ expectation
 - ★ POSSM plots (spectra)
 - ★ RM synthesis
- wide-band RFI from aircraft
 - ★ RFI spikes
 - ★ mapping the signal (3-d)
 - ★ aircraft trajectory
 - ★ what is it?

Observations

- 12 h on 13/14 Feb 2011 L2011_23410
- 115–160 MHz
- international stations: DE601, DE603, FR606
- NL stations: CS032, RS106,205,208,306,307,406,503
- problems
 - ★ DE601 failed
 - ★ 50 % of subbands bad in blocks of 30/31
<https://proxy.lofar.eu/redmine/issues/80>
 - ★ significant ionospheric delays, differential Faraday rotation

Early long-baseline image of the pulsar

Polarisation: expectation

- pulsar is (sometimes) linearly polarised
- sometimes 30 %, sometimes much less
- $RM = -42 \text{ rad/m}^2$ (or $-45?$)
- see Ger de Bruyn, LSM 29 Oct 2008

- ★ periodicity about 1 MHz
- ★ 'leakage' terms more constant
- ★ separate the two without full calibration
- ★ polarised and unpolarised at same time

POSSM plots: IQUV (set I to 10 Jy)

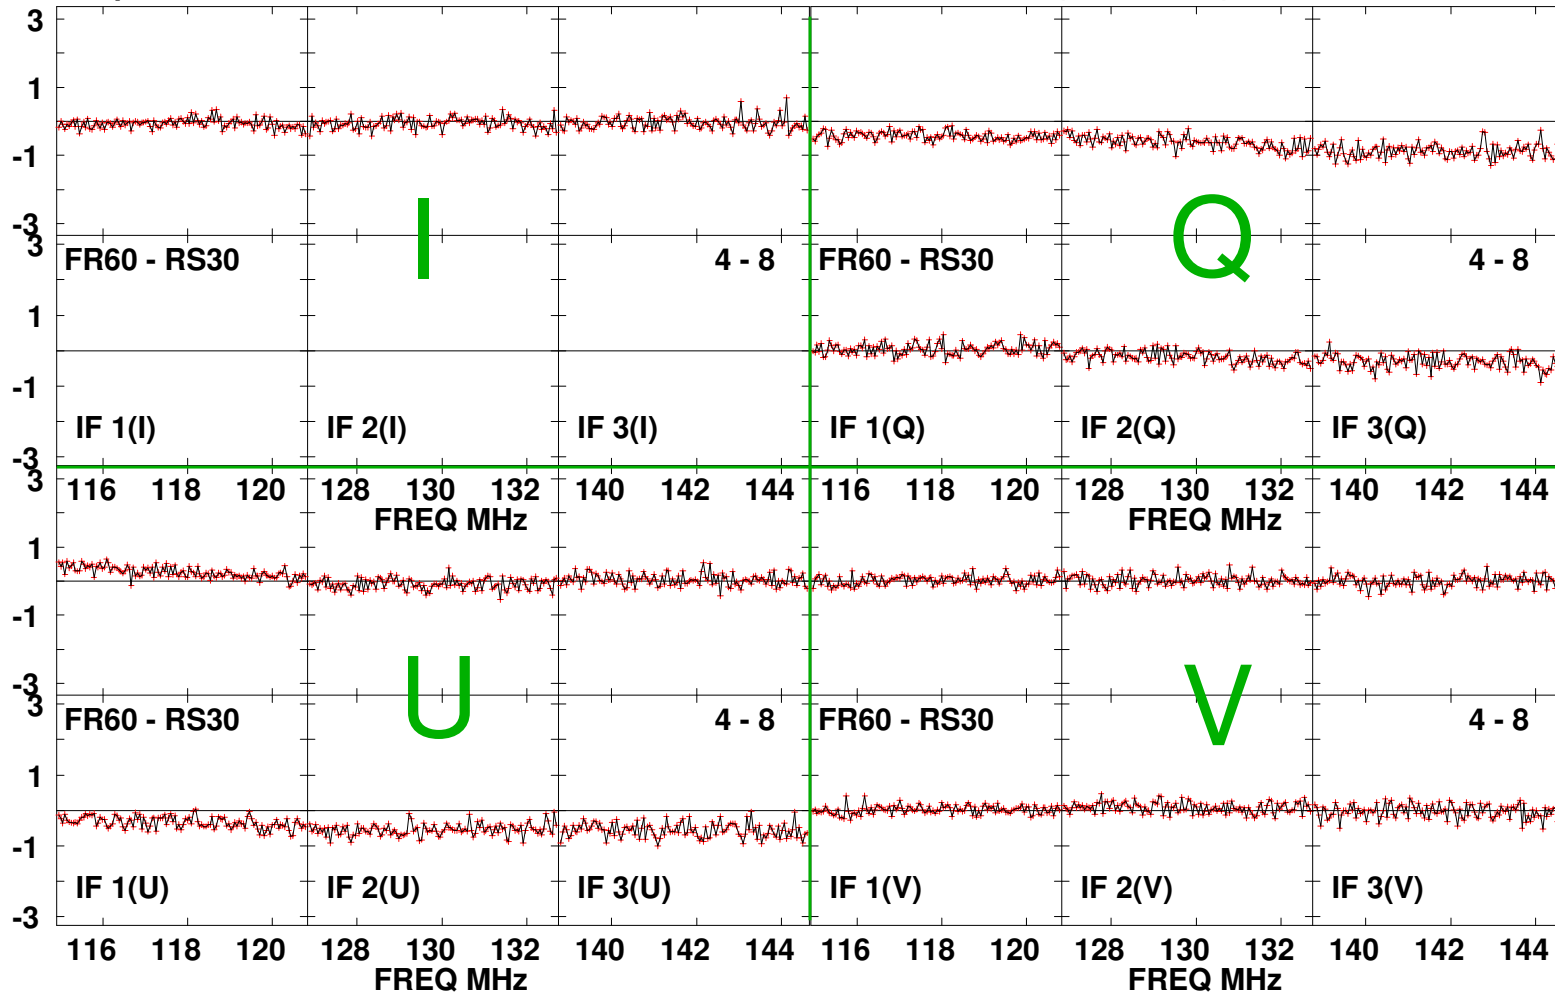

FR606-RS306

Plot file version 6 created 04-MAR-2011 17:49:27

0534+220 23410.MULTI.1

Freq = 0.1150 GHz, Bw = 5.859 MH Calibrated with CL # 3 and BP # 1 (BP mode 1)

calibrated RR and LL, averaged over 30min

imag
real
imag
real

Lower frame: Real Jy Top frame: Imag Jy

Vector averaged cross-power spectrum Baseline: FR606HBA(04) - RS306HBA(08)

Timerange: 00/20:30:17 to 00/21:00:17

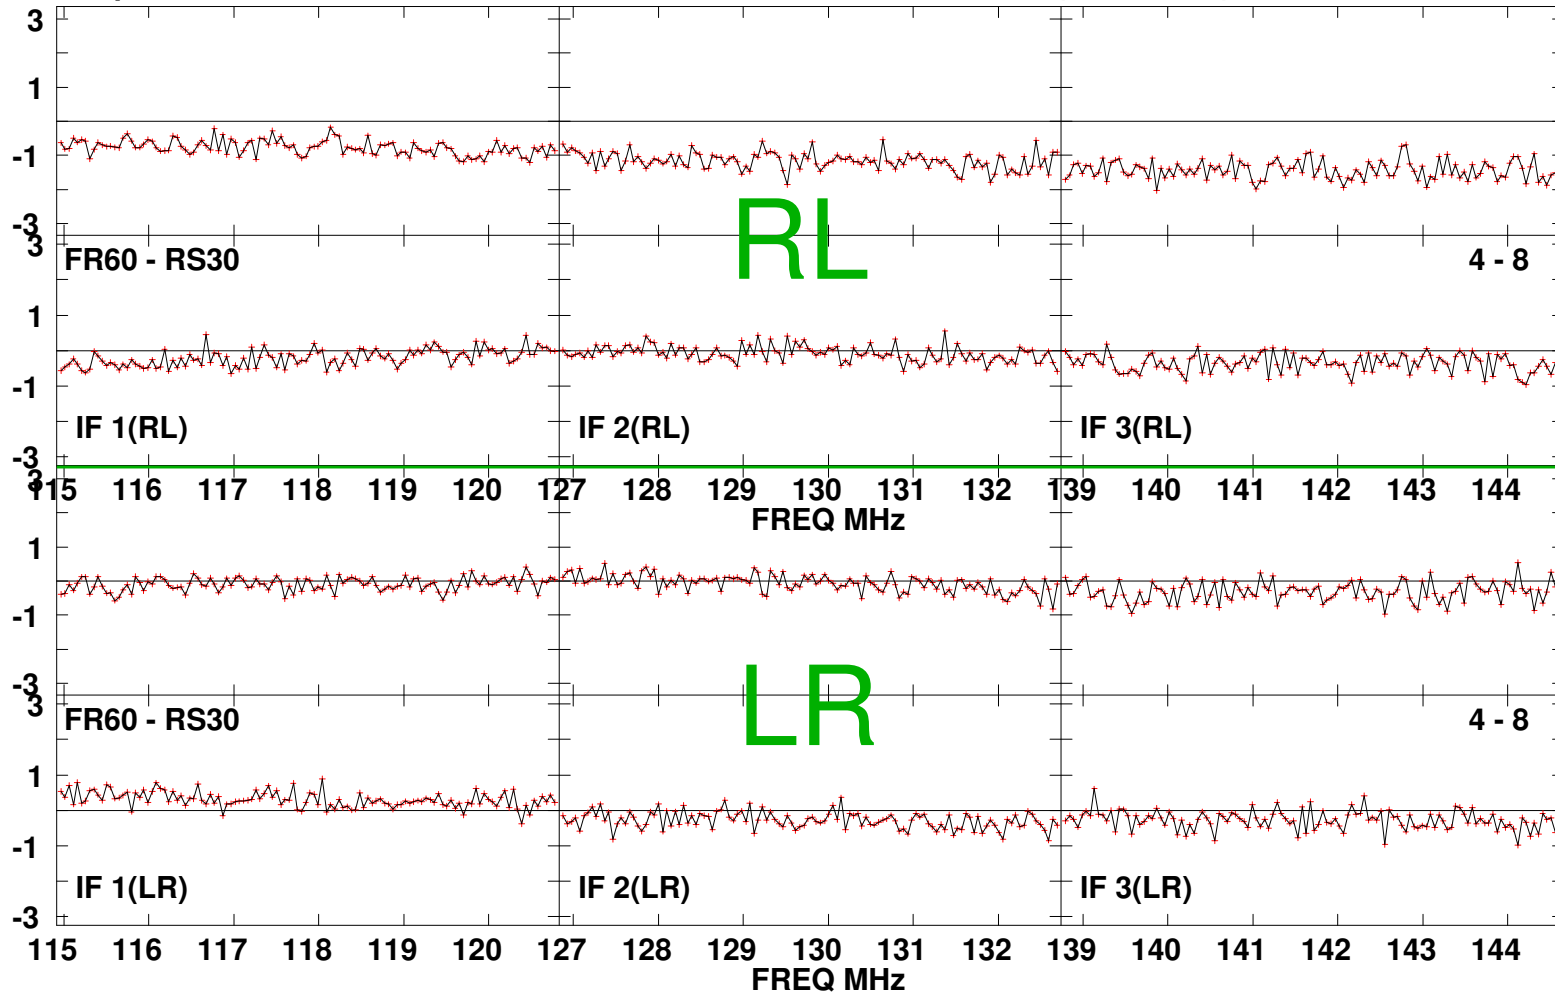

POSSM plots: RL and LR

Plot file version 6 created 06-MAR-2011 18:17:03

0534+220 23410.MULTI.1

Freq = 0.1150 GHz, Bw = 5.859 MH Calibrated with CL # 3 and BP # 1 (BP mode 1)

$$RL = Q + iU \quad LR = Q - iU$$

imag
real
imag
real

Lower frame: Real Jy Top frame: Imag Jy

Vector averaged cross-power spectrum Baseline: FR606HBA(04) - RS306HBA(08)

Timerange: 00/20:30:17 to 00/21:00:17

Faraday dispersion function from Q and U (30 subbands)

After subtraction of leakage peak (one CLEAN iteration)

Test with Stokes I

As function of frequency: blocks of 30 subbands each

115.0 – 120.9 MHz

127.0 – 132.8 MHz

138.9 – 144.7 MHz

150.8 – 156.6 MHz

Shorter integrations: 10min (highest block)

Conclusions polarisation

- weak linear polarisation
- correct RM recovered
- RM synthesis disentangles leakage and intrinsic polarisation
- frequency dependence of percentage: 0.9 / <0.5 / 0.7 / 1.7
- time-resolved (pulse phase) measurement will be interesting!
- more info:
http://www.astro.uni-bonn.de/~wucknitz/wiki/doku.php/lbg:tau_a:polarisation
<http://usg.lofar.org/forum/index.php?topic=579.0>
- estimate by Sarod Yatawatta and Ger de Bruyn: 5% !
- Questions for this part?

RFI spikes

- strong spikes (< 1 sec) left after initial flagging
- had consistent phases and sometimes small delays
- seen on all Dutch baselines
- wide: < 115 MHz – ~ 141 MHz
- beyond airband
- detectable for about 30 min

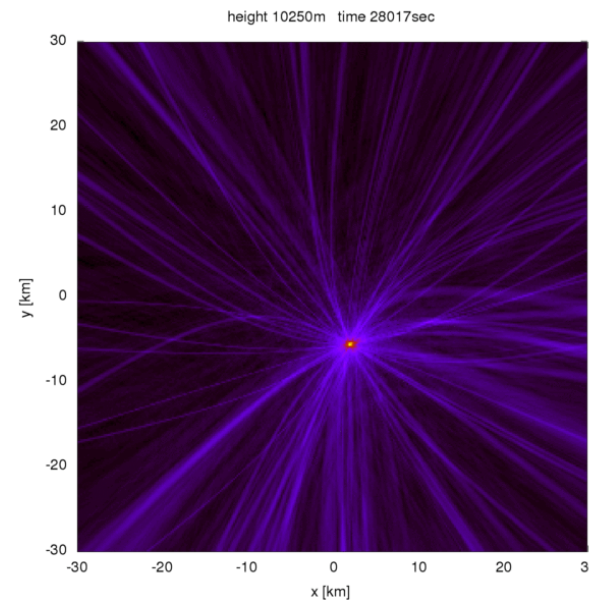

Mapping the signal

- phases not calibrated
- can measure delays on Dutch baselines
- constant delay corresponds to hyperboloid
- 3 baselines sufficient to determine position (in 3d)
- add all baselines incoherently
- scan in 2d or 3d
- first attempt: 2d scan of sky positions (at infinity)
 - ★ giant pulses?
 - ★ exotic transient?
 - ★ scan shows no clear peak

Terrestrial RFI?

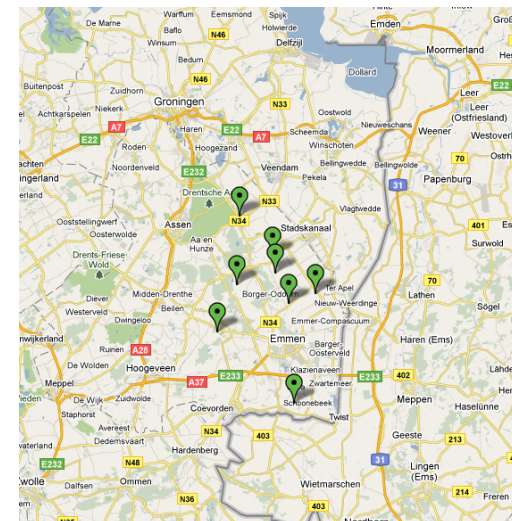

- 2d scan at ground level
 - ★ no sharp peak but large blob
 - ★ moving with time: aircraft?
- 2d scan at 10 km height
 - ★ find clear moving peak, scans with 8–60 subbands

Altitude and nearby trajectory (3d scans)

Full trajectory focused at 10200 m (2d scans)

The 3d peak: cuts in XY / XZ / YZ

- almost directly overhead
- 30 subbands
- accuracy 50–100 m
- can be improved with more subbands
but: mind the gaps!

Conclusions aircraft

- strong spikes (flux not measured yet)
- can be flagged, but may flag transients!
- aircraft at altitude of 10 km
- speed ca. 780 km/h
- first detection at distance of 350 km (horizon)
- **what is it?**
 - ★ communication is narrow-band, more restricted
 - ★ reflections from the ground?
 - ★ only one such source over 12 hours!
 - ★ higher-frequency radar? no non-linearity
 - ★ military jamming equipment?
