# LOFAR MSSS

**Multifrequency Snapshot Sky Survey** 

**George Heald** | OCE Science Leader 11 January 2017

CSIRO ASTRONOMY AND SPACE SCIENCE www.csiro.au

### **Current status and plans**

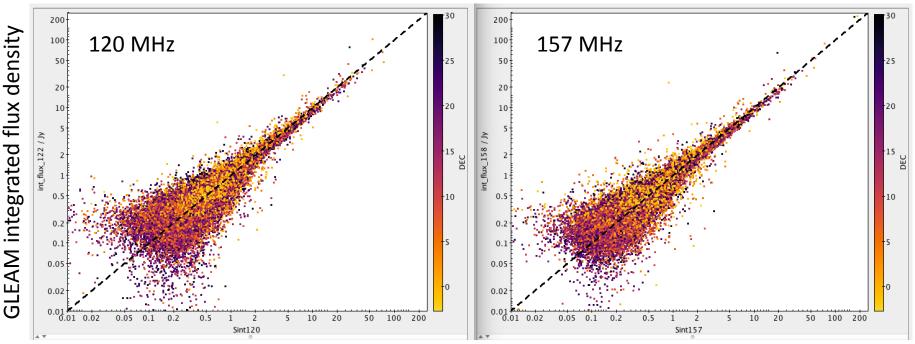

- HBA: low resolution imaging at ~2' complete
  - Entire northern hemisphere, except for exclusion zones around CasA and CygA
  - Internal catalog (v0.3) available to team, with 138,342 sources
  - Currently addressing some inconsistencies in image parameters across survey area

# **MSSS flux scale**

- New flux scale technique (Hardcastle+ 2016) applied and verified
  - In-band (120-160 MHz) fluxes now considered reliable

MSSS integrated flux density

 Reliability of flux scale across MSSS frequency coverage checked through cross-matching with GLEAM (Hurley-Walker+ 2016)

### **Current status and plans**

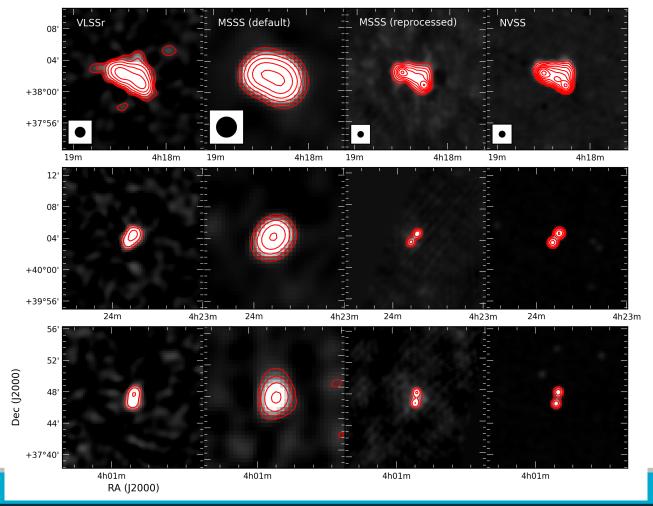

- HBA: low resolution imaging at ~2' complete
  - Entire northern hemisphere, except for exclusion zones around CasA and CygA
  - Internal catalog (v0.3) available to team, with 138,342 sources
  - Currently addressing some inconsistencies in image parameters across survey area
- Potential for higher resolution products along with availability of other high-quality surveys (GLEAM, TGSS ADR1) now motivating updated parameters for MSSS data release

# **MSSS** at higher resolution

- All Dutch station baselines included in MSSS-HBA observations
- Imaging at 30-45" resolution feasible with modest computing

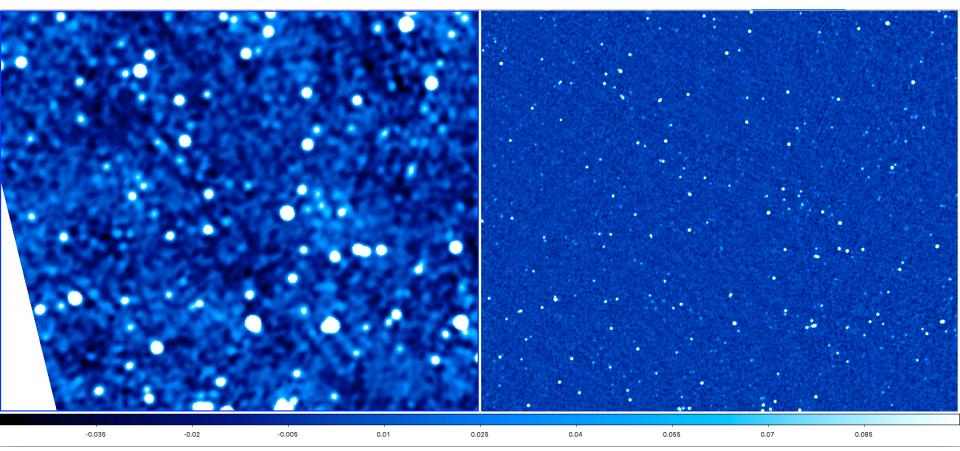

# **Example field**

• MSSS (left)

and

#### NVSS (right)

# **MSSS image quality**

- Current testing & results:
  - wsclean with full-band deconvolution
  - at 45", 3-5 mJy/beam limited by ionospheric artifacts
  - mosaicking with bespoke script (pyrap.images)
  - ~1" astrometric accuracy (based on ~1200 sources cross-matched with NVSS)
  - Updated assessments of CLEAN bias & completeness to be completed soon

# **Science from MSSS**

### Planning and call for action

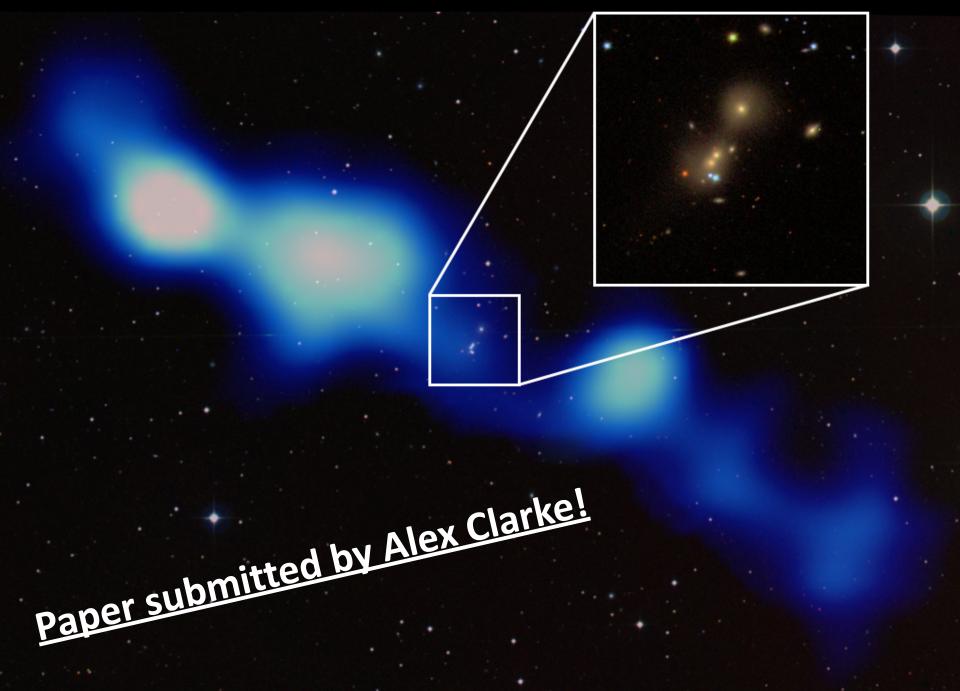

# **MSSS science projects**

- Planning underway for 33 science projects, many focused on high resolution images / catalog
- Examples (see the LOFAR wiki):
  - Gravitational lenses
  - HII regions
  - Galaxy SEDs
  - Cluster halos
  - Pulsars
  - Transients
  - GRGs
  - ... your project here? ...
- Papers submitted and ready to be submitted resp. by Alex Clarke (GRG) and Georgi Kokotanekov (AGN feedback at low frequencies)

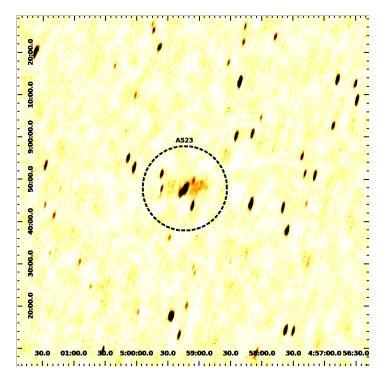

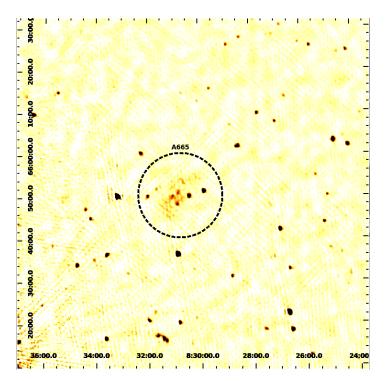

# **MSSS reimaging for cluster halo detections**

• Two examples: A523 and A665

A523 87"x25",  $\sigma$  = 3 mJy/beam emission detected at 4.5 $\sigma$ 

A665 36"x30",  $\sigma$  = 3 mJy/beam emission detected at 3.5 $\sigma$ 

Images courtesy Marco Iacobelli & Manu Orru

# **MAPS: MSSS All-sky Polarisation Survey**

- Further processing MSSS data to obtain polarised sky survey
  - high angular resolution —> avoid beam depolarisation
  - superb Faraday depth resolution —> accurate Faraday depth measurements
  - good inner uv coverage —> sensitive to Galactic foreground

Mulcahy, Farnes, Heald, Horneffer and MSSS team in collaboration with the MKSP

# **MAPS: MSSS All-sky Polarisation Survey**

- Further processing MSSS data to obtain polarised sky survey
  - high angular resolution —> avoid beam depolarisation
  - superb Faraday depth resolution —> accurate Faraday depth measurements
  - good inner uv coverage —> sensitive to Galactic foreground
- Many interesting science topics can be explored
  - Search for low frequency polarisation calibrators
  - Depolarisation of radio galaxies
  - Search for pulsars and brown dwarfs
  - studies of the local galactic foreground
  - ... and many more
